## Annals of British Legislation

1865

in the preface to volume 1 of the annals of life insurance medicine dr max e eisenring described the goal of this publication as follows any project which aims at contributing substantially to the modern science of medical underwriting can do so only if the many people preoccupied with these problems throughout the world join forces to the ultimate benefit of those most in need of life assurance in an endeavour to keep the life insurance medical directors all over the world informed of the developments in the field of life insurance medicine we have decided to publish the papers which were presented at the 11 th international congress of life assurance medicine in mexico in 1973 in volume 5 of the annals we are most grateful to dr j ren06n president of the organizing committee of the congress in mexico for having consented to our publishing the proceedings of the congress in a special edition of the annals it is a source of great satisfaction to us that in this way a much larger circle of life insurance medical directors can be reached than would have been the case if only the participants themselves were to receive the proceedings of the congress dissemination of the results of medical research on an international basis in particular those findings that have a bearing on life insurance medicine is one of our foremost aims

## List of journals indexed in Index medicus

2004

the apicomplexa is a globally prevalent group of parasitic protozoa that cause disease from malaria in humans to livestock diseases such as coccidiosis babesiosis red water tick fever and east coast fever with significant economic impacts a number of apicomplexa are also zoonotic leading to grave potential public health consequences infection prevention efforts by immunisation or management of arthropod vector infestation have not been universally successful and can have knock on effects such as pollution of the environment and human food chain and development of insecticidal or acaricidal resistance this book highlights the similarities and differences between the various apicomplexa infections identifying those of greatest significance and suggesting sustainable approaches to better manage their impact on livestock productivity suitable for researchers and students of veterinary parasitology and related disciplines this book is a valuable resource covering this important set of parasites

have drawn most of their models for the emergence of social complexity from research in the middle east and latin america bernard wailes was a strong advocate for the importance of later prehistoric and early medieval europe as an alternative model of sociopolitical evolution and trained generations of american archaeologists now active in european research from the neolithic to the middle ages two centuries of excavation and research in europe have produced one of the richest bodies of archaeological data anywhere in the world the abundant data show that technological innovations such as metallurgy appeared very early but urbanism and state formation are comparatively late developments key transformative process such as the spread of agriculture did not happen uniformly but rather at different rates in different regions the essays in this volume celebrate the legacy of bernard wailes by highlighting the contribution of the european archaeological record to our understanding of the emergence of social complexity they provide case studies in how ancient europe can inform anthropological archaeology not only do they illuminate key research topics they also invite archaeologists working in other parts of the world to consider comparisons to ancient europe as they construct models for cultural development for their regions although there is a substantial corpus of literature on european prehistoric and medieval archaeology we do not know of a comparable volume that explicitly focuses on the contribution that the study of ancient europe can make to anthropological archaeology
