the process control industry has seen generations of technology advancement from pneumatic communication to electrical communication to electronic c munication from centralized control to distributed control at the center of today s distributed control systems are operator workstations these operator wo stations provide the connection between those overseeing and running plant operations to the process itself with each new generation of products the operator workstation has become increasingly more intelligent newer applications provide advanced alarming control and diagnostics behind all of these applications are smarter devices these smart devices provide greater process insight reduce en neering costs and contribute to improving the overall operational performance of the plant smart devices include advanced diagnostics that can report the health of the device and in many cases the health of the process that the device is connected to it is not uncommon for smart devices to include diagnostics that can detect plugged lines burner flame instability agitator loss wet gas orifice wear leaks and cavitations these devices tell the user how well they are operating and when they need maintenance improvements in sensor technology and diagnostics have lead to a large variety of smart devices so how do users connect the capabilities of these smart devices to their existing control system infrastructures the answer is wireless wireless technology has matured to the point that it now can be safely applied in industrial control monitor and asset management applications
