by periodically reversing the polarity swapping the north and south poles of one set of electromagnets the ev motor leverages these attracting and repelling forces to rotate the shaft

## **electric motor wikipedia**

Jun 09 2023

an electric motor is an electrical machine that converts electrical energy into mechanical energy most electric motors operate through the interaction between the motor s magnetic field and electric current in a wire winding to generate force in the form of torque applied on the motor s shaft

## **how an electric motor works in a car**

May 08 2023

a three phase four pole induction motor is made of two main parts a stator and a rotor the stator is made of three parts a stator core conducting wire and frame the stator core is a group of steel rings that are insulated from one another and then laminated together
