this book covers recent developments in the understanding quantification and exploitation of entanglement in spin chain models from both condensed matter and quantum information perspectives spin chain models are at the foundation of condensed matter physics and quantum information technologies and elucidate many fundamental phenomena such as information scrambling quantum phase transitions and many body localization moreover many quantum materials and emerging quantum devices are well described by spin chains comprising accessible self contained chapters written by leading researchers this book is essential reading for graduate students and researchers in quantum materials and quantum information the coverage is comprehensive from the fundamental entanglement aspects of quantum criticality non equilibrium dynamics classical and quantum simulation of spin chains through to their experimental realizations and beyond into machine learning applications volcanoes sometimes host a lake at the earth s surface these lakes are the surface expressions of a reservoir often termed a hydrothermal system in highly fractured permeable and porous media where fluids circulate they can become monitoring targets since they integrate the heat flux discharged by an underlying magma body and condense some volcanic gases since they trap volcanic heat and gases they are excellent tools to provide additional information about the status of a volcano and volcanic lake related hazards this special publication comes at an exciting time for the volcanic lake community it brings together scientific papers which include studies of their structure hydrogeological modelling long term multi disciplinary monitoring efforts as well as a number of innovative methods of sampling data acquisition and in situ and laboratory experiments several papers challenge long established paradigms and introduce new concepts and terminologies this collection of papers will be a useful reference for researchers dealing with volcanic lakes and more generally with hydrothermal systems phreatic hydrothermal eruptions and wet volcanoes this book investigates the presence of fides good faith in flavian literature exploring its ideological significance in the aftermath of rome s civil wars 68 69 ce in a variety of works by prose and verse authors when ford rolled out the mustang in april 1964 it was an instant hit even with its immense popularity it didn t stop ford corporate zone managers and dealerships from taking it an extra step further just two short months later the first special edition mustang debuted at the indianapolis 500 tasked with pacing the race and it s been full throttle ever since this book examines more than 300 special edition mustangs from 1964 through today coverage includes factory offerings such as the 2001 bullitt and svt cobras regional promotions including the twister special third party tuners such as roush and saleen and factory race cars including the 1968 1 2 cobra jets and the 2000 cobra r you may find mustangs in this book that you had no idea even existed never has a volume this detailed and with this many model mustangs been offered published the authors have taken their decades of research and logged them into a single compilation each mustang is accompanied by production numbers key features and photos of surviving cars whenever possible this book is sure to be a valued resource in your mustang memorabilia collection p p1 margin 0 0px 0 0px 0 0px 0 0px font 12 0px arial this book explores the archaeology and ethnography of the indigenous people who inhabited argentina s pampas and the patagonia region for the past several years a number of research programs have funded significant efforts to advance understanding of and forecasting capabilities for the gulf of mexico circulation including the loop current its associated eddies and abyssal dynamics one such program is the national academies understanding gulf ocean systems initiative which focuses on improving forecasts of the physical dynamics of the open gulf of mexico in space and time scales useful for the reduction of risks to offshore energy exploration and production as well as for other challenges such as forecasting hurricane intensification and managing fisheries what has been learned how can this scientific progress be incorporated into operational models and what are the remaining gaps in knowledge impeding predictive skill this book aims to give an overview on the present state of volcanic lake research covering topics such as volcano monitoring the chemistry dynamics and degassing of acidic crater lakes mass energy chemical isotopic balance approaches limnology and degassing of nyos type lakes the impact on the human and natural environment the eruption products and impact of

2016 held as part of the 18th international conference on human computer interaction hci 2016 held in toronto on canada in july 2016 the total of 1287 papers and 186 posters presented at the hci 2016 conferences were carefully reviewed and selected from 4354 submissions the papers thoroughly cover the entire field of human computer interaction addressing major advances in knowledge and effective use of computers in a variety of application areas the 43 contributions included in the scsm 2016 proceedings were organized in the following topical sections designing and developing social media users behaviour in social media social media policy politics and engagement social network analysis social media in learning and collaboration and enterprise social media the first book in the patai series was published in 1964 and the series will celebrate its 50th anniversary in 2014 this golden jubilee is accompanied by the publication of the first volume on the chemistry of organogold in the history of the patai series there was so far no volume dedicated to gold alone in 1999 we published a volume on the chemistry of gold and silver compounds since then a lot of new chemistry using gold has been developed and it is timely to focus a volume on methods and applications of organogold compounds in organic synthesis reflecting the enormous progress which has been made in the use of gold compounds as reagents and catalysts a second area of great importance covered in the book is the use of gold surfaces in the synthesis of peptides proteins and other natural products a whole range of applications in the area of biochemistry has resulted from these developments a third area of interest is the synthesis and engineering of nanostructures where organogold chemistry has opened the door for a wide range of methods and applications in the field of nanoscience and materials science as with all new volumes the chapters are first published online in patai s chemistry of functional groups once a volume is completed online it is then published in print format the printed book offers the traditional quality of the patai book series complete with an extensive index in this book gustavo g politis and luis a borrero explore the archaeology and ethnography of the indigenous people who inhabited argentina s pampas and the patagonia region from the end of the pleistocene until the 20th century offering a history of the nomadic foragers living in the harsh habitats of the south america s southern cone they provide detailed account of human adaptations to a range of environmental and social conditions the authors show how the region s earliest inhabitants interacted with now extinct animals as they explored and settled the vast open prairies and steppes of the region until they occupied most of its available habitats they also trace technological advances including the development of pottery the use of bows and arrows and horticulture making new research and data available for the first time politis and borrero s volume demonstrates how geographical variation in the southern cone generated diverse adaptation strategies atrial fibrillation from an engineering perspective provides an up to date overview of techniques developed for acquisition modeling and analysis of noninvasive bioelectrical signals reflecting this common arrhythmia special emphasis is put on emerging technologies for monitoring of atrial fibrillation in connection with ischemic stroke interventional ablation procedures and pharmacological treatment applications which all depend on the availability of techniques for detecting and characterizing episodes of paroxysmal atrial fibrillation detectors exploring both rhythm and morphology are described as well as detectors confined to rhythm and better suited for low power implementation a wide variety of approaches to modeling and characterization of atrial activity are described emanating from a statistical and deterministic starting points this book is suitable for graduate students researchers and engineers who want a comprehensive treatise of atrial fibrillation from an

engineering perspective it may be used for self study as a supplement to courses in signal processing or as a modern monograph by researchers in the field of atrial fibrillation this research seeks to close an essential research gap the understanding of the water management strategies of the maya in pre hispanic times it focuses on the archaeological investigation of the hydraulic system of uxul a medium sized maya centre in the south of the state of campeche mexico through an in depth examination of higher education actors and policy instruments in the case of the implementation of bologna in ukraine this book aims to analyse the process of the bologna reform in ukraine and investigate bologna as a case of europeanisation in the post soviet context this book provides a comprehensive description of the volcanological petrological and geochemical features of the poás volcano costa rica one of the most active volcanic systems in central america and part of the central america volcanic arc cava poás volcano hosts a unique sulfur lake which actually is one of the world s most acidic lakes and has experienced molten sulfur eruptions past investigations current monitoring activities and planned programs of investigation into lessening of the volcanic hazard are reported here specific sections of the monograph will be devoted to the impact of this volcano on the social agricultural and industrial activities in the area legends and popular traditions related to this volcano will be described in the last chapter to round up a complete scientific review on this unique volcanic system now in its fifth edition harris o boyle and warbrick law of the european convention on human rights remains an indispensable resource for undergraduates postgraduates and practitioners alike the new edition builds on the strengths of previous editions providing an up to date clear and comprehensive account of strasbourg case law and its underlying principles it sets out and critically analyses each convention article including those addressed by relevant protocols and thoroughly examines the system of supervision the book also addresses the pressures and challenges facing the strasbourg system in the twenty first century digital format this fifth edition is available for students and institutions to purchase in a variety of formats the e book offers a mobile presente obra ha procurado ser fruto de una reflexión y análisis filosóficos de carácter ético político y jurídico en torno a dos nociones lo justo y el don esto en los trabajos de diversos pensadores principalmente españoles y del actual siglo adscritos fundamentalmente a la perspectiva de la filosofía personalista hermenéutica y existencial se han escogido diversas ideas clave iniciando así los pasos de un análisis que investigue en torno a la relación que puede establecerse entre el ámbito supraético de la gratuidad abundante del don y el ámbito ético simétrico y existencial de la justicia y de este modo de lo justo núcleo o nudo de tal relación martín rocha espíndola nació el 17 de junio de 1975 en santiago de chile realizó sus estudios primarios y secundarios con los hermanos maristas en el instituto alonso de ercilla de esa misma ciudad cursó la licenciatura de derecho en la pontificia universidad católica de chile y durante un tiempo ejerció liberalmente la abogacía en su país de origen en españa obtuvo la suficiencia investigadora en la universidad autónoma de madrid luego estudió el máster en derecho español en la universidad de valladolid para posteriormente homologar sus estudios y colegiarse en el ilustre colegio de la abogacía de madrid en

esta última universidad en 2013 se doctoró en derecho con distinción máxima con un trabajo titulado claves para entender las reformas del derecho de familia español principios informadores posteriormente en 2020 también se doctoró nuevamente con máxima distinción en el programa de humanidades lengua y cultura en la universidad rey juan carlos de madrid con la tesis lo justo como don en la filosofía española del siglo xxi hacia una ética del don en clave personalista hermenéutica y existencial en la actualidad sus principales ámbitos de investigación están centrados en la filosofía moral jurídica y política así como en la historia del pensamiento jurídico compensating a four decades shortfall this collective volume is the first reader in byzantine spatial studies it offers a organization of the united nations and with contributions from international leading experts veterinary vaccines principles and applications is a concise and authoritative reference featuring easily readable reviews of the latest research in vaccinology and vaccine immune response to pathogens of major economic impact to livestock it covers advice and recommendations for vaccine production quality control and effective vaccination schemes including vaccine selection specifications vaccination programs vaccine handling in the field application failures and assessment of herd protection in addition the book presents discussions on the current status and potential future developments of vaccines and vaccination against selected transboundary animal diseases provides a clear and comprehensive guide on using veterinary vaccines to protect livestock from diseases teaches the principles of vaccinology and vaccine immune response highlights the vaccine production schemes and standards for quality control testing offers easy to read reviews of the most current research on the subject gives readers advice and recommendations on which vaccination schemes are most effective discusses the today s state of vaccines and vaccination against selected transboundary animal diseases as well as possible future developments in the field veterinary vaccines principles and applications is an important resource for veterinary practitioners animal health department officials vaccine scientists and veterinary students it will also be of interest to professional associations and ngo active in livestock industry while the world s population continues to grow the availability of water remains constant facing the looming water crisis society needs to tackle strategic management issues as an integrated part of the solution toward water sustainability the first volume in the two volume set sustainable water management and technologies offers readers a practical and comprehensive look at such key water management topics as water resource planning and governance water infrastructure planning and adaption proper regulations and water scarcity and inequality it discusses best management practices for water resource allocation ground water protection and water quality assurance especially for rural arid and underdeveloped regions of the world timely topics such as drought ecosystem sustainability climate change and water management for shale oil and gas development are presented discusses best practices for water resource allocation ground water protection and water quality assurance offers chapters on urban rural arid and underdeveloped regions of the world describes timely topics such as drought ecosystem sustainability climate change discusses water resource monitoring efficiency and quality management una defensa acérrima de la utilidad de la filosofía en nuestros días de la mano del gran pensador emilio lledó la filosofía se nos aparece como una ocupación de algunos hombres tan real e importante como esas otras ocupaciones que han modificado técnica o artísticamente la faz del mundo y las relaciones humanas está la filosofía en crisis o sigue siendo una ocupación necesaria para entender y analizar el mundo puede considerarse la filosofía un oficio cómo debe dialogar la filosofía con la historia precedente o con la ciencia y la tecnología de nuestro siglo bajo estos interrogantes el gran pensador emilio lledó atiende la urgencia de recuperar la filosofía como una materia indispensable para ejercer un pensamiento crítico in good standing in the episcopal church more than 18 000 deacons priests and bishops it includes full biographical information and ministry history for each cleric this handbook offers an up to date and comprehensive overview of core themes and concepts in community based tourism management providing interdisciplinary insights from leading international scholars this is the first book to critically examine the current status of community based tourism organised into five parts the handbook provides cutting edge perspectives on issues such as indigenous communities tourism and the environment sustainability and the impact of digital communities part 1 introduces core concepts and methodologies and distinguishes community products from other tourism and hospitality goods part 2 explores communities attitudes towards tourism development and their engagement with and ownership of the process it also delves into the role of community based tourism under the influence of governmental policies in the economic and social development of a region in part 3 various management marketing and branding initiatives are identified as a means of expanding the tourism business part 4 examines the negative impacts of mass tourism and its threats to culture tradition identity the built environment and natural heritage in the final and fifth part future challenges and opportunities for community based tourism initiatives are considered and research based sustainable solutions are proposed overall the book considers engaging local populations in tourism development as a way of building stronger and more resilient communities this handbook fills a void in the current research and thus will appeal to scholars students and practitioners interested in tourism management tourism geography business studies development policy and practice regional development conservation and sustainability el volumen sintaxis del español the routledge handbook of spanish volcanoes sometimes host a lake at the earth s surface these lakes are the surface expressions of a reservoir often termed a hydrothermal system in highly fractured permeable and porous media where fluids circulate they can become monitoring targets since they integrate the heat flux discharged by an underlying magma body and condense some volcanic gases since they trap volcanic heat and gases they are excellent tools to provide additional information about the status of a volcano and volcanic lake related hazards this special publication comes at an exciting time for the volcanic lake community it brings together scientific papers which include studies of their structure hydrogeological modelling long term multi disciplinary monitoring efforts as well as a number of innovative methods of sampling data acquisition and in situ and laboratory experiments several papers challenge long established paradigms and introduce new concepts and terminologies this collection of papers will be a useful reference for researchers dealing with volcanic lakes and more generally with hydrothermal systems phreatic hydrothermal eruptions and wet volcanoes

for the past several years a number of research programs have funded significant efforts to advance understanding of and forecasting capabilities for the gulf of mexico circulation including the loop current its associated eddies and abyssal dynamics one such program is the national academies understanding gulf ocean systems initiative which focuses on improving forecasts of the physical dynamics of the open gulf of mexico in space and time scales useful for the reduction of risks to offshore energy exploration and production as well as for other challenges such as forecasting hurricane intensification and managing fisheries what has been learned how can this scientific progress be incorporated into operational models and what are the remaining gaps in knowledge impeding predictive skill
