### How to Cure and Prevent Cancer 2022-09-22

getting cancer is very common nowadays it may be a loved one a relative or your next door neighbour who has got cancer and is now desperately trying to find a cancer cure finding a cure when one is already diagnosed with cancer is definitely more difficult and nerve wrenching than adopting good cancer prevention habits in the first place learning how to prevent cancer is a must for everyone because cancer does not discriminate anyone can get it to treat and prevent cancer new ideas are being thrown out there everyday but all of them are based on living a healthy lifestyle going on a detox diet is a newer form of cancer prevention that has really taken off preventing cancer is possible if you keep your body healthy and free of toxins eating healthily is always advisable no matter what disease you are fighting the reason for this is that healthy foods contain vitamins and have properties that make your body function better a body that functions properly and at an efficient level stays healthier that brings us to exercise exercise helps your body to burn fat and keeps your muscles toned it also helps your heart and lungs work better which allows your blood to flow better and keeps waste moving through your body properly keeping a healthy lifestyle prepares your body to be healthy a detox diet helps your body organs to work at its optimal level and without obstruction it helps help to remove toxins from your body and remove waste more efficiently a detox program usually involves lots of fiber and water and giving your body organs a break fiber helps your body to remove waste which frees up your system to digest food better this in return gives you more energy water has an overall effect on your energy levels and how your body functions instead of letting waste build up and causing loads of problems the detox diet rids your body of waste that frees up your colon in a nutshell the detox diet lets your colon get back to work and for your colon to work optimally once again a colon that is not working can only result in cancer among other things this vegetable provides you with almost half of your daily requirement of vitamin c and on top of that it is a fiber rich food making sure you get enough fiber every day especially from vegetables is one of the best ways to protect yourself from cancer and other diseases fiber keeps your intestinal tract clean and prevents the build up of toxins on intestinal walls if you've never heard of prebiotics then you should get familiar prebiotics are consumed by the beneficial bacteria in your intestines and used to maintain healthy digestion beta carotene is an antioxidant that is contained in many super foods it is the type of vitamin a that is most beneficial for your body and we've all heard about how rich carrots are in vitamin a they provide you with over 3 times the daily recommended amount of vitamin a like many vegetables such as cabbage and whole grains carrots are a quality source of beneficial fiber for your body once again you'll keep your intestinal bacteria in healthy populations due to the prebiotic nature of carrot fiber mixing carrots and cabbage would provide you with a very nutritious super food snack or side dish this would provide you with a day's worth of fiber and help you maintain regularity start exercising this is actually one of the cheapest easiest and potentially most effective tactics we have in promoting a healthy active and forceful immune system we make it hard even though it doesn't need to be there is no need to join a health club or purchase fancy equipment just make exercise

## ***A World Without Cancer 2013-10-01***

A provocative and surprising investigation into the ways that profit personalities and politics obstruct real progress in the war on cancer and one doctor's passionate call to action for change. This year, nearly 1.6 million new cases of cancer will be diagnosed, and more than 1,500 people will die per day. We've been asked to accept the disappointing strategy to manage cancer as a chronic disease. We've allowed pharmaceutical companies to position cancer drugs that extend life by just weeks and may cost 100,000 for a single course of treatment. As breakthroughs, why have we been able to cure and prevent other killer diseases but not most cancers? Where is the bold government leadership that will transform our system from treatment to prevention? Have we forgotten the mission of the National Cancer Act of 1971 to conquer cancer through an analysis of over 40 years of medical evidence and interviews with cancer doctors, researchers, drug company executives, and health policy advisors? Dr. Cuomo reveals frank and intriguing answers to these questions. She shows us how all cancer stakeholders—the pharmaceutical industry, government physicians, and concerned Americans—can change the way we view and fight cancer in this country.
