spoon s architects and builders price book 2004 is the most detailed professionally relevant source of construction price information currently available anywhere with competition growing fiercer throughout the industry and with increasing pressure to obtain a competitive advantage the a and b s unique tender index will be more valuable than ever before this is the only price book that publishes details of its cost base in such a way that it can be adjusted to allow for market conditions that affect building prices a separate minor works section on coloured paper covers contracts of around 65 000 in value the a and b comes with a free cdrom that enables the reader to view the entire book on screen cut and paste prices into other tender documents export to other major packages perform simple calculations index search produce estimate and tender documents and adjust rates and data this complete package now means that spoon s architects and builders price book 2004 is now better than ever and is a resource that no building firm surveyor or architect should be without new features in this 129th edition include an easier to read format information on and incorporating the new cicj three year wage agreement effective from monday 30th june 2003 it also includes additional items for hot and cold water piping systems additional building boards and external wall cladding further aluminium systems curtain walling western red cedar external wall cladding fire retardant steel beams metal and glazed balustrading sarnafil roofing and acoustic sliding partitions reports for 1862 66 include reports of the ohio pomological society thermal insulation handbook for the oil and gas industries addresses relative design materials procedures and standard installation necessities for various oil and gas infrastructure such as pipelines subsea equipment vessels and tanks with the continued increase in available natural gas ready to export especially lng and the definition of deepwater changing every year an understanding of thermal insulation is more critical than ever this one of a kind handbook helps oil and gas engineers ensure that their products are exporting safely and that the equipment s integrity is protected topics include design considerations and component selection including newer materials such as cellular glass methods to properly install the insulation material and notable inspection and safety considerations in accordance with applicable us and international standards specifically designed for the oil and gas industry calculations to make sure that every scenario is considered and requirements for size composition and packaging are met effectively understand all appropriate new and existing insulation material properties as well as installation requirements gain practical knowledge on factors affecting insulation efficiency rules of thumb and links to real world case studies maximize flow assurance safely and economically with critical calculations provided comprehensive and practical pavement asset management provides an essential resource for educators students and those in public agencies and consultancies who are directly responsible for managing road and airport pavements the book is comprehensive in the integration of activities that go into having safe and cost effective pavements using the best technologies and management processes available this is accomplished in seven major parts and 42 component chapters ranging from the evolution of pavement management to date requirements to determining needs and priority programming of rehabilitation and maintenance followed by structural design and economic analysis implementation of pavement management systems basic features of working systems and finally by a part on looking ahead the most current methodologies and practical applications of managing pavements are described in this one of a kind book real world up to date examples are provided as well as an extensive list of references for each part this volume provides an in depth analysis of over 100 plant communities of the dolomite vegetation the data is based on the phytosociological relevés which have been collected by the authors in nearly 2000 surveys the key part consists of approx 130 association tables presenting plant sociological data for the respective plant communities thus this volume perfectly complements the successful main volume plant life of the dolomites vegetation structure and ecology which features summarized synoptic association tables of the twelve habitats in addition geo referenced locations of relevés and detailed ecological measures are provided a further part describes the individual components of the fascinating dolomitic landscape heritage of all humanity and presents tables of vegetation complexes which summarize the more than 400 surveys carried out in the dolomites the structure of this supplementary volume corresponds to that of the main volume with a key part consisting of twelve chapters each describing a specific habitat and a total of 106 associations several topics covered in the main volume such as the exploration of the flora ecological factors and syntaxonomy are discussed further here international organizations are increasingly operating across borders and engaging in legal transactions in virtually all jurisdictions this makes familiarity with the applicable law and practice imperative for both international organizations and those who engage in legal relations with them furthermore the issue of whether how and to what extent domestic courts take into account decisions of foreign and international courts and tribunals in their own decision making has become increasingly important in recent years this book provides a comprehensive empirical study of this transnational judicial dialogue focusing on the law and practice of domestic jurisdictions concerning the legal personality privileges and immunities of international organizations it presents a selection of detailed country by country studies examining the manner of judicial dialogue across domestic jurisdictions and between national and

international courts the approach taken in this book intersects with three highly topical areas of international legal scholarship the rapidly evolving law of international institutions the burgeoning research into the role of domestic courts in the international legal system and the recent rise of empirically oriented legal scholarship utilizing our s international law in domestic courts database the book presents analysis of little known cases which have real international significance illustrating the impact and extent of transnational judicial dialogue in the international legal system the book provides important perspectives on the evolution and status of the law of immunity of international organizations and contributes to the understanding of relationships between national courts and between national and international courts melanie klein remains one of the most important and influential figures in psychoanalysis klein pioneered the analysis of children and applied her insights on the infantile origins of unconscious drives to adult analysis meira likierman s study is the best available introduction to melanie klein s thought and work socrates knew all that was known by his contemporaries but already in the middle ages it was becoming difficult for a single man to have a truly encyclopedic view of all human knowledge it is true that pico della mirandola pius ii leonardo da vinci and several other great minds were thoroughly in possession of considerable know ledge and knew all that one could know except no doubt for some techniques the encyclopedists of the 18th century had to be content with an admirable survey they could not go into details and their work is a collective one the specialized science of each collaborator compensating for the insufficiencies of the others we know very well that our science of today is a science of specialists not only is it impossible for anyone person to assimilate the totality of human knowledge it is impossible even to know ones own discipline perfectly thoroughly each year the presses of science pro duce a frightening quantity of printed paper even in very limited fields new journals are created every day devoted to extremely specialized often very narrowly defined subjects it is indeed evident that in a field whose scope extends well beyond astronomical or astrophysical research it is materially impossible to be informed of everything even with the richest of libraries at hand millets and sorghum are extremely important crops in many developing nations and because of the ability of many of them to thrive in low moisture situations they represent some exciting opportunities for further development to address the continuing and increasing impact of global temperature increase on the sustainability of the world s food crops the main focus of this thorough new book is the potential for crop improvement through new and traditional methods with the book s main chapters covering the following crops sorghum pearl millet finger millet foxtail millet proso millet little millet barnyard millet kodo millet tef and fonio further chapters cover pests and diseases nutritional and industrial importance novel tools for improvement and seed systems in millets millets and sorghum provides full and comprehensive coverage of these crucially important crops their biology world status and potential for improvement and is an essential purchase for crop and plant scientists and food scientists and technologists throughout the developed and developing world all libraries in universities and research establishment where biological and agricultural sciences are studied and taught should have copies of this important book on their shelves structural concrete discusses the design and analysis of reinforced and prestressed concrete structural components and structures each of the eight chapters of the book tackles a specific area of concern in structural concrete the text first deals with the serviceability and safety and then proceeds to the properties of materials and mix designs the next two chapters cover reinforced concrete beams and slabs chapter 5 discusses column and walls while chapter 6 tackles reinforced concrete frames and continuous beams and slabs the next chapter discusses design structures while the last chapter covers prestressed concrete the text will be of great use to undergraduate students of civil and structural engineering professionals whose work involves concrete technology will also find the book useful marine engineering series marine electrical practice sixth edition focuses on changes in the marine industry including the application of programmable electronic systems generators and motors the publication first ponders on insulation and temperature ratings of equipment protection and discrimination and ac generators discussions focus on construction shaft drive generators effect of unbalanced loading subtransient and transient reactance protection discrimination fault current measurement of ambient air temperature and basis of machine ratings the text then examines ac switchgear automatic voltage regulators dc generators and dc switchgear topics cover switchgear for parallel operated generators protection against short circuit field regulators and the effect of tropical temperatures compound wound generators power generators loading sharing voltage comparison circuit and amplifier and condition circuit the manuscript surveys electric cables motors motor control gear semiconductors storage batteries and battery control gear concerns include calculations to determine the size of battery required types of storage batteries rectifiers tunnel diodes maintenance of control gear overload protection insulation sheathing and flexible cords and cables the publication is a dependable reference for marine engineers and researchers interested in marine engineering the laser power handling capacities of optical systems are determined by the physical properties of their component materials at low intensity levels these factors are not important but an understanding of damage mechanisms is fundamental to good design of laser products operating at high power laser induced damage of optical materials presents this book constitutes the refereed proceedings of the 15th international conference on image analysis and processing iciap 2009 held in vietri sul mare italy in september 2009 the 107 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 168 submissions the papers are organized in topical sections on computer graphics and image processing low and middle level processing 2d and 3d segmentation feature extraction and image analysis object detection and recognition video analysis and

processing pattern analysis and classification learning graphs and trees applications shape analysis face analysis medical imaging and image analysis and pattern recognition the museum environment second edition deals with the behavior and conservation of the various classes of museum exhibit this book is divided into six sections that provide museum specifications for conservation this text highlights the three contributing factors in the deterioration and decay of museum exhibits namely light humidity and air pollution each section describes the mechanism of deterioration and the appropriate preventive conservation the changes in this edition from the previous include the electronic hygrometry fluorescent lamps buffered cases air conditioning systems and data logging and control in historic buildings this book is of great value to conservation researchers and museum workers secession is the creation of a new independent state out of an existing state this key volume examines the political social and legal processes of the practice of secession following an analysis of secessionist movements and their role in attempts at secession eight case studies are explored to illustrate peaceful violent sequential and recursive secessions this is followed by a look at the theoretical approaches and a discussion that focuses on the economic causes normative theories of secession are discussed as well as the status of secession in legal theory and practice the book systematizes our present knowledge of secessions in an accessible way to readers not familiar with the phenomenon and its consequences it is ideal as a supplementary text to courses on contemporary political and social movements applied ethics and political philosophy international relations and international law state sovereignty and state formation
