this book presents a geopolitical analysis of the upcoming human exploration of celestial bodies in the inner solar system by the major space powers it utilizes a systemic approach to the analysis of political events in space to develop a comprehensive overview of the factors influencing planned or proposed missions to the selected objects the moon mars and asteroids as a result of this analysis the book establishes forward looking scenarios of possible developments to highlight the main fault lines of the upcoming operations beyond the currently most heavily utilized terrestrial orbits this framework is rooted in a holistic overview of factors relevant to the mid term settlement and mining efforts and allows us to highlight the main focal points that will determine the future power distribution inside the inner solar system the methodology is based on the analysis of an interplay of numerous factors deemed crucial for the decision making of the major space powers and their capacities to promote their interests in a given region major space powers are for the purpose of this book understood as those actors with a realistic ability to participate in or lead the inner solar system colonization and mining missions in the mid term future for which scenario making is the most suitable given the realities of space travel however smaller actors are also taken into consideration as a part of

cooperative efforts which are nonetheless dominated by the major players or alternatively as possible spoilers of the efforts in several regional settings the book thus provides an in depth analysis of the possible futures regarding the nearing competition over the celestial bodies this book will be of much interest to students of space power and policy geopolitics airpower and international relations

this volume details how new theories and methods have recently advanced the archaeological study of initial human colonization of islands around the world including in the southwest pacific the mediterranean the caribbean and southeast asia this global perspective brings into comparison the wide variety of approaches used to study these early migrations and illuminates current debates in island archaeology evidence of island colonization is often difficult to find especially in areas impacted by sea level rise and these essays demonstrate how researchers have tackled this and other issues contributors show the potential of computer simulations of voyaging in determining the range of timing and origin points that were possible in the past they discuss how bayesian modeling helps address uncertainties and controversies surrounding radiocarbon dating additionally advances in biomolecular techniques such as ancient dna adna paleoproteomics analysis of human microbiota and improved resolution in isotopic analyses are

providing more refined information on the homelands of initial settlers on individual life courses and on population level migrations islands offer rich opportunities to examine the exploratory nature of the human species providing insights into the evolution of watercraft technologies and wayfinding the impact of humans on their new environments and the motivations for their journeys the archaeology of island colonization represents the innovative ways today s archaeologists are reconstructing these unique paleolandscapes contributors nasullah aziz david ball todd j braje richard callaghan john f cherry ethan cochrane robert j dinapoli andrew dugmore jon m erlandson scott m fitzpatrick amy e gusick derek hamilton terry l hunt thomas p leppard carl p lipo jillian maloney matthew f napolitano anthony newton maria a nieves colón rintaro ono adhi agus oktaviana timothy rieth curtis runnels magdalena m e schmid alexander j smith harry octavianus sofian sriwigati jessica h stone orri vésteinsson a volume in the series society and ecology in island and coastal archaeology edited by victor d thompson

new or recently sterilized islands for example through volcanic activity provide ecologists with natural experiments in which to study colonization development and establishment of new biological communities studies carried out on islands like this have provided answers to fundamental questions as to what general principles are involved in the ecology of communities and what processes underlie and maintain the basic structure of ecosystems these studies are vital for conservation biology especially when evolutionary processes need to be maintained in systems in order to maintain biodiversity the major themes are how animal and plant

communities establish particularly on new land or following extirpations by volcanic activity this book comprises a broad review of island colonization bringing together succession models and general principles case studies with which professor ian thornton was intimately involved and a synthesis of ideas concluding with a look to the future for similar studies

reverse colonization narratives are stories like h g wells s war of the worlds where technologically superior martians invade and colonize england that ask western audiences to imagine what it s like to be the colonized rather than the colonizers in this book david m higgins argues that although some reverse colonization stories are thoughtful and provocative because they ask us to think critically about what empire feels like from the receiving end reverse colonization fantasy has also led to the prevalence of a very dangerous kind of science fictional thinking in our current political culture everyone now including anti feminists white supremacists and far right reactionaries likes to imagine themselves as the rebel alliance fighting against the empire or neo trying to escape the matrix or katniss everdeen waging war against the capitol reverse colonization fantasy in other words has a dangerous tendency to enable white men and

other subjects of privilege to appropriate a sense of victimhood for their own social and political advantage

according to accepted historical wisdom the goal of the african colonization society acs founded in 1816 to return freed slaves to africa was borne of desperation and illustrated just how intractable the problems of race and slavery had become in the nineteenth century united states but for brandon mills the acs was part of a much wider pattern of national and international expansion similar efforts on the part of the young nation to create in thomas jefferson s words an empire of liberty spanned native removal the annexation of texas and california filibustering campaigns in latin america and american missionary efforts in hawaii as well as the founding of liberia in 1821 mills contends that these diverse currents of u s expansionism were ideologically linked and together comprised a capacious colonization movement that both reflected and shaped a wide range of debates over race settlement citizenship and empire in the early republic the world colonization made chronicles the rise and fall of the colonization movement as a political force within the united states from its roots in the crises of the revolutionary era to its peak with the creation of the acs to its ultimate decline with emancipation and the civil war the book interrogates broader issues of u s expansion including the progression of federal indian policy the foundations and effects of the monroe doctrine and manifest destiny and the growth of u s commercial and military power throughout the western hemisphere by contextualizing the colonization movement in this way mills shows how it enabled americans to envision a world of self governing republics that harmonized with racial politics at home
