Applying the Illuminating Hidden Harvests approach 2024-01-23

this document has been adapted from the research protocol used to compile country case study data and to produce the results summarized in the 2023 report titled illuminating hidden harvests the contributions of small scale fisheries to sustainable development hereafter ihh study fao duke university worldfish 2023 it has also been designed in conjunction with the e learning course titled collecting secondary data on small scale fisheries and aims to support practitioners and researchers around the world in compiling national and subnational data and assess the contributions and impacts of small scale

fisheries of interest to sustainable development these contributions of small scale fisheries are categorized according to the environmental economic and social including gender equality and nutrition and food security dimensions of sustainable development as well as the governance of small scale fisheries the approach to compile ihh data was developed in a way that i is adaptable to each country s context and data availability and ii is comprehensive yet straightforward and cost effective while originally designed to be conducted at the national level this approach can and should be modified as desired to fit different scales of study and to respond to the particular needs and priorities of individual researchers regions of interest as the name implies the approach was designed to compile existing data on small scale fisheries and not to collect it rather this approach only reinforces the importance of collecting more detailed data specific to small scale fisheries for example as distinct from large scale fisheries aguaculture and recreational fisheries in order to help fill the knowledge gap on small scale fisheries contributions to sustainable development given the vast diversity of small scale fisheries in different countries a standard definition of small scale fisheries is not prescribed here nor in the ihh study researchers should refer to the definitions used in each country context however to better characterize fisheries and the differences among them that often contribute to local definitions of small or large scale fisheries the ihh study and this approach used a fisheries activity characterization matrix this tool provides a characterization of the small scale fisheries subsector at the country level and allows researchers to assess the scale of small scale fishing activities in a more relational manner thus avoiding the imposition of fixed definitions

locally computable nc0 functions are simple functions for which every bit of the output can be computed by reading a small number of bits of their input the study of locally computable cryptography attempts to construct cryptographic functions that achieve this strong notion of simplicity and simultaneously provide a high level of security such constructions are highly parallelizable and they can be realized by boolean circuits of constant depth this book establishes for the first time the possibility of local implementations for many basic cryptographic primitives such as one way functions pseudorandom generators encryption schemes and digital signatures it also extends these results to other stronger notions of locality and addresses a wide variety of fundamental questions about local cryptography the author s related thesis was honorably mentioned runner up for the acm dissertation award in 2007 and this book includes some expanded sections and proofs and notes on recent developments the book assumes only a minimal background in computational complexity and cryptography and is therefore suitable for graduate students or researchers in related areas who are interested in parallel cryptography it also introduces general techniques and tools which are likely to interest experts in the area

many areas of mining engineering gather and use statistical information provided by observing the actual operation of equipment their systems the development of mining works surface subsidence that

accompanies underground mining displacement of rocks surrounding surface pits and underground drives and longwalls amongst others in addition the actual modern machines used in surface mining are equipped with diagnostic systems that automatically trace all important machine parameters and send this information to the main producer s computer such data not only provide information on the technical properties of the machine but they also have a statistical character furthermore all information gathered during stand and lab investigations where parts assemblies and whole devices are tested in order to prove their usefulness have a stochastic character all of these materials need to be developed statistically and more importantly based on these results mining engineers must make decisions whether to undertake actions connected with the further operation of the machines the further development of the works etc for these reasons knowledge of modern statistics is necessary for mining engineers not only as to how statistical analysis of data should be conducted and statistical synthesis should be done but also as to understanding the results obtained and how to use them to make appropriate decisions in relation to the mining operation this book on statistical analysis and synthesis starts with a short repetition of probability theory and also includes a special section on statistical prediction the text is illustrated with many examples taken from mining practice moreover the tables required to conduct statistical inference are included
