Daily Report: People's Republic of China. Index 1982 a comprehensive study in efficient multi  
rate teletraffic loss models used for designing performance analysis and optimization of  
systems and networks efficient multirate teletraffic loss models beyond erlang is an easy to  
read book filled with numerous efficient teletraffic loss models presented in three sections  
teletraffic models of random input teletraffic models of quasi random input and teletraffic  
models of batched poisson input it covers everything that a professional experienced with  
optimization and dimensioning of telecom networks could ever need to know this unique book  
provides a detailed explanation on how efficient multirate teletraffic loss models are  
extracted and applied and guides readers through almost all network technologies and services  
starting from the basics it steadily increases in difficulty to keep the book self contained  
and to provide a better understanding to those who might be new to the subject it includes  
detailed explanations of the complex teletraffic models many of which were developed by the  
authors tutorial examples several backed by supplementary software are accompanied by  
intermediate results and figures additionally end of chapter applications describe the  
applicability of the models to modern network technologies updating the incorporated  
teletraffic models of commercial packages tools uses the classic emlm erlang multirate loss  
model as its base to present a comprehensive range of teletraffic models through detailed  
explanation and numerical examples filled with the authors own original teletraffic models  
making for a wholly unique learning experience offers a clear self contained presentation with  
a beginning middle and end starts with simple models then moves to more complex models before  
finishing with complicated ones supplemented by an accompanying website with computer  
implementation of the most important models directed primarily at telecommunication engineers
