2006

algae have been used since ancient times as food fodder fertilizer and as source of medicine nowadays seaweeds represent an unlimited source of the raw materials used in pharmaceutical food industries medicine and cosmetics they are nutritionally valuable as fresh or dried vegetables or as ingredients in a wide variety of prepared foods in particular seaweeds contain significant quantities of protein lipids minerals and vitamins there is limited information about the role of algae and algal metabolites in medicine only a

few taxa have been studied for their use in medicine many traditional cultures report curative powers from selected alga in particular tropical and subtropical marine forms this is especially true in the maritime areas of asia where the sea plays a significant role in daily activities nonetheless at present only a few genera and species of algae are involved in aspects of medicine and therapy beneficial uses of algae or algal products include those that may mimic specific manifestations of human diseases production of antibiotic compounds or improvement of human nutrition in obstetrics dental research thallassotherapy and forensic medicine

driven by the widespread growth of proteomic practices protein separation techniques have been refined to minimize variability optimize particular applications and adapt to user preferences in the analysis of proteins separation methods in proteomics provides a comprehensive examination of all major separation techniques for proteomics research written as a compilation of hands on methods exemplified by the work of several recognized leaders in the field this book may serve as a guide for selection of the optimal separation strategies to solve particular biological problems recent progress

in the development of robust analytical techniques and instrumentation has created the need for good quality biological samples that are subject to analysis emphasizing the importance of sample preparation the book explains how proteomes can be divided into smaller less complicated subproteomes for individual analysis it also highlights several hybrid approaches that take into account protein interactions including applications of the separation methods currently employed in proteomic analyses for both clinical and basic research separation methods in proteomics contains practical information that can enhance the current and future endeavors of scientists in proteomics genomics transcriptomics biomarker discovery and drug discovery

## Separation Methods In Proteomics

2005-12-12

this book provides state of the art reviews the latest research prospects and challenges of the production of platform chemicals such as c6 sugars 5 hydroxymethylfurfural furfural gamma valerolactone xylitol 2 5 furandicarboxylic acid levulinic acid ethanol and others from sustainable biomass resources using processes that include heterogeneous catalysis ionic liquids hydrothermal solvothermal electrochemical and fermentation methods it also discusses the application of these chemicals and their derivatives for synthesizing commodity chemicals via various routes intended as a reference resource for researchers academicians and industrialists in the area of energy chemical engineering and biomass conversion it provides a wealth of information essential for assessing the production and application of various

biomass derived platform chemicals using biological chemical and electrochemical techniques

this work presents the state of the art of aquatic and semi aquatic ecological restoration projects in the netherlands starting from the conceptual basis of restoration ecology the successes and failures of hundreds of restoration projects are described numerous successful projects are mentioned in general ecological restoration endeavours greatly benefit from the progressive experience achieved in the course of the years failures mainly occur through insufficient application of physical chemical or ecological principles spontaneous colonization by plants and animals following habitat reconstruction is preferred however sometimes the re introduction of keystone species e g eelgrass salmon beaver is necessary in case the potential habitats are isolated or fragmented or if a seed bank is lacking thus not allowing viable populations to develop re introducing traditional management techniques e g mowing without fertilization low intensity grazing is important to rehabilitate the semi natural and cultural landscapes that are so characteristic for the netherlands
