the discovery of life on other planets would be perhaps the most momentous revelation in human history more disorienting and more profound than either the copernican or darwinian revolutions which knocked the earth from the center of the universe and humankind from its position of lofty self regard in here be dragons astronomer david koerner and neurobiologist simon levy offer a scientifically compelling and colorful account of the search for life beyond earth the authors survey the work of biologists cosmologists computer theorists nasa engineers seti researchers roboticists and ufo enthusiasts and debunkers as they attempt to answer the greatest remaining question facing humankind are we alone from their safe haven of skepticism the authors venture into the rough seas of speculation where theory and evidence run the gamut from hard science to hocus pocus arguing that the universe is spectacularly suited for the evolution of living creatures koerner and levy give us ringside seats at the great debates of big science the contentious arguments about what really happens in evolution

the acrimonious ufo controversy and the debate over intelligence versus artificial intelligence shed new light on the wildly divergent claims about the universe and life s place in it the authors argue that while no direct evidence of extraterrestrial life yet exists habitats and chemical building blocks for life abound in the universe a wealth of new astronomical techniques and space missions may provide this evidence early in the next century lucidly written and scientifically rigorous here be dragons presents everything we know thus far about the emergence of intelligent life here on earth and perhaps beyond

science empirical knowledge and technology applied science have long played a key role in social development in modern times they have come to be seen as absolutely essential factors in the achievement of economic growth and development and though many dispute their ascendancy and legitimately point to their abuses there is no escaping their presence and impact taking as a main theme the central role of science and technology in economic progress this first of a kind sourcebook gathers together the perspectives and expertise of an international body of specialists in science and technology policy to examine the role of science and technology in development and assess their social economic and political dimensions the authors look at the key issues in relation to the exigencies of developing countries in the new international context they emphasize the complexity of the links between science

technology and development and the important insights to be gained from the study of these links the authors also point out that despite science and technology s promise of social and economic progress such progress is less than ever an inevitable result of their application though there is no doubt about what can be achieved through science and technology the quest is an uncertain one book jacket title summary field provided by blackwell north america inc all rights reserved

scientist robert hazen attempts to offer a scientific explanation of how life on earth began nearly four billion years ago describing the sequence of events that caused non living chemicals to become alive and create life

The Science Quest 2010

some have argued that life began in the chemical rich seas of the early earth the famous primordial soup while others are convinced that life began in strange vents pumping hot water out of the sea floor where the chemical reactions that sustain living cells could get started or perhaps life began in volcanic ponds on land or in meteorite impact zones or even in beds of clay each idea has attracted staunch believers who promote it with an almost religious fervor but the story of life s origins is more than this it is a story that takes in some of the greatest discoveries in modern biology from cells to dna and evolution to life s family tree this book is the first full history of the scientists who struggled to explain one of the greatest mysteries of all how and why life began
