colors and where applicable the two digit serial number prefix this special issue focuses on the scientific forum held at the beginning of the international technical conference on animal genetic resources for food and agriculture which took place in interlaken switzerland in september 2007 with species existing in all subpolar seas king crabs are one of the most valuable seafoods major fluctuations in their abundance have stimulated a flurry of research and a rapid expansion of the scientific literature in the last decade king crabs of the world biology and fisheries management consolidates extensive knowledge on the biology systematics anatomy life history and fisheries of king crabs and presents it in a single volume this book is the first comprehensive scientific reference devoted to the biology and fisheries of king crabs the first part of the book describes king crabs and their place in the world covering geographic distribution depth and temperature ranges and maps of known habitats chapters examine phylogenetic relationships evolutionary history and phylogeography internal and external anatomy of king crabs and the history of north pacific fisheries there is also a chapter that presents a comprehensive overview of diseases and other anomalies of king crabs the second part of the book describes the life history and biology of various king crab species including embryonic development and environmental factors the development and biology of larvae the ecology and biology of juvenile stages reproductive strategies of fished species and the growth and feeding of king crabs and their ecological impacts the third part of the book discusses human and environmental interactions with king crabs through fisheries management and ecosystems topics include the impacts of fishing bycatch handling and discard mortality king crab aquaculture and stock enhancement and king crabs from various regions such as southern hemisphere waters the barents sea and alaska a chapter synthesizing various aspects of king crab biology provides an ecosystem scale perspective and the final chapter presents the author s outlook on the future of king crab research and populations with facts and figures on geography history economy cultures and people of the new frontier the 29th edition is packed with much about alan turing and the invention of the computer great discoveries

**the man who knew too much alan turing and the invention
of the computer great discoveries**

~~as long lasting sourdoughs long ago we invited bears into our~~
stories our dreams our nightmares our lives we have always
sought them out where they live for their hides their meat
their beauty their knowingness human country and bear country
exist side by side as sherry simpson suggests the
relationship between bears and humans is ancient and ongoing
and in alaska profoundly and often uncomfortably close a huge
number of north america s bears live in alaska including at
least 31 000 brown bears 100 000 black bears and 3 500 polar
bears and nearly every aspect of alaskan society reflects
their presence from hunting to tourism marketing to wildlife
management to urban planning a long time alaskan simpson
offers a series of compelling essays on alaskan bears in both
wild and urban spaces because in alaska bears are found not
only in their natural habitat but also in cities and towns
combining field research interviews and a host of up to date
scientific sources her finely polished prose conveys a wealth
of information and insight on ursine biology behavior feeding
mating social structure and much more simpson crisscrosses
the alaskan landscape in pursuit of bears as she muses
marvels and often stands in sheer awe before these
charismatic creatures firmly grounded in the expertise of
wildlife biologists hunters and viewing guides she shows
bears as they actually are not as we imagine them to be she
considers not only the occasionally aggressive behavior bears
need to survive but also the violence exacted upon them by
trophy hunters advocates of predator control or suburbanites
who view bears as land sharks that threaten the safety of
their families shifting effortlessly between fascinating
facts and poetic imagery simpson crafts an extended
meditation on why we are so drawn to bears and why they
continue to engage our imaginations populate indigenous
mythologies and help define our essential visions of
wilderness as simpson observes the slightest evidence that
bears share your world or that you share theirs can alter not
only your sense of the landscape but your sense of yourself
within that landscape
