FCC Record 2019-03-17 both the way we look at data through a dbms and the nature of data we ask a dbms to manage have drastically evolved over the last decade moving from text to images and to sound to a lesser extent visual representations are used extensively within new user interfaces powerful visual approaches are being experimented for data manipulation including the investigation of three dimensional display techniques similarly sophisticated data visualization techniques are dramatically improving the understanding of the information extracted from a database on the other hand more and more applications use images as basic data or to enhance the quality and richness of data manipulation services image management has opened a wide area of new research topics in image understanding and analysis the ifip 2 6 working group on databases strongly

believes that a significant mutual enrichment is possible by confronting ideas concepts and techniques supporting the work of researcher and practitioners in the two areas of visual interfaces to dbms and dbms management of visual data for this reason ifip 2 6 has launched a series of conferences on visual database systems the first one has been held in tokyo 1989 vdb 2 was held in budapest 1991 this conference is the third in the series as the preceding editions the conference addresses researchers and practitioners active or interested in user interfaces human computer communication knowledge representation and management image processing and understanding multimedia database techniques and computer vision
