Harold D. Lasswell is arguably the quintessential face of political science to the larger public of the past century. However, there is a side to Lasswell less well known but of special importance in this day and age: the place of the profession of politics as an academic activity. This book, written at the start of the culture wars thirty years ago, outlines the basic core position of political science practitioners. It helps to explain why the field kept its collective cool when other social science professionals veered to more extreme activist positions. The future of political science grew out of the phenomenally rapid expansion of the study of government in the United States and elsewhere. The study of professionalism among physical scientists, lawyers, engineers, etc. was not matched by such internal examination within the social sciences until much later. Lasswell's overview centered on developments in the United States. There, unfettered study of government reached unprecedented heights in the final stage of the twentieth century. The key concept of this volume, one that continues to inform discourse, is the relationship of political science as a mechanism for the study and teaching of the political system to the field as a tool of the establishment. This concern grew in the wake of a variety of scandals and secret support sponsored by both government and non-government organizations alike. The future of political science covers areas ranging from membership size and disparities, intervention scenarios in world events, the nature of creativity in political research, collaboration in projects with the other social sciences, and the location of scientific centers of gravity in the study of politics. Because of Lasswell's works, we have a field of the political science of knowledge as well as the sociology of knowledge. Harold D. Lasswell served as Ford Foundation Professor of the Social Sciences at Yale University, distinguished professor of Policy Sciences at John

a generation ago scholars saw interest groups as the single most important element in the american political system today political scientists are more likely to see groups as a marginal influence compared to institutions such as congress the presidency and the judiciary frank baumgartner and beth leech show that scholars have veered from one extreme to another not because of changes in the political system but because of changes in political science they review hundreds of books and articles about interest groups from the 1940s to today examine the methodological and conceptual problems that have beset the field and suggest research strategies to return interest group studies to a position of greater relevance the authors begin by explaining how the group approach to politics became dominant forty years ago in reaction to the constitutional legal approach that preceded it they show how it fell into decline in the 1970s as scholars ignored the impact of groups on government to focus on more quantifiable but narrower subjects such as collective action dilemmas and the dynamics of recruitment as a result despite intense research activity we still know very little about how groups influence day to day governing baumgartner and leech argue that scholars need to develop a more coherent set of research questions focus on large scale studies and pay more attention to the context of group behavior their book will give new impetus and direction to a field that has been in the academic wilderness too long

a new model for the relationship between science and democracy that spans policymaking the funding and conduct of research and our

approach to new technologies our ability to act on some of the most pressing issues of our time from pandemics and climate change to artificial intelligence and nuclear weapons depends on knowledge provided by scientists and other experts meanwhile contemporary political life is increasingly characterized by problematic responses to expertise with denials of science on the one hand and complaints about the ignorance of the citizenry on the other politics and expertise offers a new model for the relationship between science and democracy rooted in the ways in which scientific knowledge and the political context of its use are imperfect zeynep pamuk starts from the fact that science is uncertain incomplete and contested and shows how scientists judgments about what is significant and useful shape the agenda and framing of political decisions the challenge pamuk argues is to ensure that democracies can expose and contest the assumptions and omissions of scientists instead of choosing between wholesale acceptance or rejection of expertise to this end she argues for institutions that support scientific dissent proposes an adversarial science court to facilitate the public scrutiny of science reimagines structures for funding scientific research and provocatively suggests restricting research into dangerous new technologies through rigorous philosophical analysis and fascinating examples politics and expertise moves the conversation beyond the dichotomy between technocracy and populism and develops a better answer for how to govern and use science democratically

voters expect their elected representatives to pursue good policy and presume this will be securely founded on the best available knowledge yet when representatives emphasize their reliance on expert knowledge they seem to defer to people whose authority derives not politically from the sovereign people but from the presumed objective status of their disciplinary bases this book examines the tensions between political authority and expert authority in the formation of public policy in liberal democracies it aims to illustrate and better understand the nature of these tensions rather than to argue specific ways of resolving them the various chapters explore the complexity of interaction between the two forms of authority in different policy domains in order to identify both common elements and differences the policy domains covered include climate geoengineering discourses environmental health biotechnology nuclear power whaling economic management and the use of force this volume will appeal to researchers and to convenors of post graduate courses in the fields of policy studies foreign policy decision making political science environmental studies democratic system studies and science policy studies
