the mediterranean sea nestled between africa southern europe and the middle east may be envisioned as a complex picture puzzle comprising numerous intricate pieces many of which are already in place a general image in terms of science has emerged although at this time large gaps are noted and some areas of the picture remain fuzzy and indistinct in recent years this fascinating mind teasing puzzle image has become clearer with individual pieces more easily recognized and rapidly emplaced largely by means of multidisciplinary and multinational team efforts in this respect the special program panel on marine sciences of the nato scientific affairs division considered the merits of initiating four conferences bearing on the mediterranean ecosystem it was suggested that the first emphasizing geology should dovetail with subsequent seminars on physical oceanography marine biology and ecology and man's influence on the natural mediterranean regime at a conference held in banyuls sur mer france in august 1979 professor raimondo selli was urged by some panel members to initiate an advanced research institute that would focus primarily on the geologically recent evolution of the mediterranean sea and serve as a logical base for future nato conferences on the mediterranean

# **Climate and Environmental Change in the Mediterranean Basin - Current Situation and Risks for the Future. First Mediterranean Assessment Report 2020-11-17**

the first mediterranean assessment report mar1 prepared by the independent network of mediterranean experts on climate and environmental change medecc founded in 2015 was published in november 2020 mar1 assesses the best available scientific knowledge on climate and environmental change and associated risks in the mediterranean basin in order to render it accessible to policymakers stakeholders and citizens the report has been written by 190 scientists from 25 countries all contributing in individual capacity and without financial compensation the report includes a summary for policymakers spm which comprises the key messages of the mar1 the unep map barcelona convention secretariat through its plan bleu regional activity center and the secretariat of the union for the mediterranean work in partnership to support medecc and to contribute to establish a sound and transparent scientific assessment process

# **Biodiversity of the Mediterranean Basin 2019**

the mediterranean basin its political economy and changing international relations examines the political economy and changing international relations of the mediterranean basin emphasis is on the increasing europeanization of most mediterranean countries whereby they are moving more and more into the economic political and strategic orbit of western europe this text is divided into three parts the first of which discusses the effects of the southern enlargement of the european community on the mediterranean basin with particular reference to turkey morocco and tunisia the second part explores some key issues in the political economy of the area and shows how most mediterranean countries are becoming increasingly locked into the western european political economy in three areas agriculture labor market and energy source oil and gas the third part is concerned with the involvement of the superpowers in the mediterranean considering the developments in the east west naval competition in the region and how they relate to the countries of the area the disputes between greece and turkey in relation to the united states are also highlighted each of these three parts is made up of two or three case studies that illustrate the three different kinds of europeanization process in the mediterranean basin this book will be of interest to political economists

political scientists and policymakers in the field of international relations

## **The Mediterranean Basin** **2013-10-22**

the mediterranean region is distinguished for its special geographical geoeconomical geopolitical and environmental specialities being at the cross roads of three continents makes water a central issue for regional policies the regional meeting on water in the mediterranean basin was expected to bring together the mediterranean community of water to identify and analyze major regional perspective on global water issues the outcomes of this meeting provided a significant contribution incorporating the development of the thematic and political processes at the region among the main topics that is covered in this book are the effects of climate change on water resources water and infrastructures integrated water resource management and innovative solutions for the water problems in the mediterranean region

## **Water in the Mediterranean Basin** **2016-02-08**

it is becoming clear that the mediterranean region is one of the hottest of the biodiversity hotspots on the planet there is also an increasing concern for the conservation adaptive management and restoration of

the unique natural ecosystems and cultural landscapes that characterize this area the region s biological and cultural heritage as well as its huge wealth of biodiversity is now at real risk this brings a further urgency to the task of communicating detailed but readily accessible information on the mediterranean biota and an ecological historical and evolutionary perspective to the changing contexts in which the region s flora and fauna continue to evolve there is no other recent textbook devoted solely to mediterranean evolutionary ecology and a synthesis of the many recent advances is now overdue this new work builds on the success and reputation of the first edition although the text has been updated and expanded to document recent changes to biodiversity new ecological and evolutionary insights and the challenges for the future these changes include the addition of two new chapters devoted to the mediterranean sea itself and especially the coastal areas throughout the book the pressing issues of global change especially climate warming are addressed in conjunction with changing land use and in terms of their potential impact on biota communities ecosystems and landscapes

## **The Mediterranean Region**

### **2010-01-28**

the mediterranean basin is the largest of the five mediterranean climate regions and one of the largest

archipelagos in the world the basin is located at the intersection of two major landmasses eurasia and africa and has around five thousand islands which contribute much to its high diversity and spectacular scenery it possesses higher salinity than the atlantic the shores are chiefly mountainous earthquakes and volcanic disturbances are frequent some of the most ancient civilizations flourished around the region carthagians greeks sicilians and romans were rivals for dominance of its shores and trade the basin virtually became a roman lake under the roman empire later the region was dominated by the byzantines and the arabs the development of the northern regions of africa and of oil fields in the middle east has increased its trade the flora is dramatic with over 20 thousand endemic vascular plant taxa and many endemic species of animals fish about 400 species sponges and corals are plentiful the touristic activities are threatening populations of many species the fragmentation and isolation is increasing due to resort development and infrastructure the overuse of the sea s natural and marine resources continues to be a problem the mediterranean monk seal the barbary macaque and the iberian lynx which is critically endangered are among the region s imperiled species

## **Natural Environment and Culture in the Mediterranean**

## Region II 2011-05-25

the mediterranean a land of blues skies warm sunshine rugged mountains and azure seas yet this familiar image conceals another mediterranean a secret landscape populated by a dazzling variety of wild flowers and plants from spectacular orchids and ancient olive trees to delicate snowdrops and hardy cacti following on from their widely acclaimed flora of the silk road chris and basak gardner present a stunning selection of 600 of the finest wild flowers that grow in the mediterranean regions of the world travelling across five continents europe north america africa south america and australia the authors reveal the rich botanical profusion that makes up the flora of the mediterranean regions of the world for each region a succession of the most outstanding flowers is featured from the spectacular and exotic to the beautiful yet familiar with each plant presented in its natural habitat beginning with the countries of the mediterranean basin the reader is taken along the rugged atlas mountains through andalucía and italy to arrive at the amazing botanical richness of greece southern anatolia and jordan in california and chile the journey is through flowering deserts snow capped peaks and towering forests of redwood and monkey puzzle trees beside a coast lapped by the pacific ocean the ancient landscapes of southern australia provide a truly remarkable assemblage of astonishing flora whilst the western cape of south africa is home to an unimaginable diversity of flora the accompanying text

provides descriptions of the species plant families and their distribution as well as offering guidance to those wishing to photograph plants in the wild with 600 stunning colour photographs and presenting a breadth of flora never before brought together in a single volume the authors offer a unique window on the floral wonders of the mediterranean world

## **Flora of the Mediterranean**

### **2020-03-06**

this book considers the development of oil flows in the mediterranean area this involves a full consideration of major suppliers and potential producers in the downstream phase of the industry the book evaluates the evolution of the refining industry and the stresses caused by environmental concerns and poor profitability it also assesses the role of the mediterranean in the world system

## ***The Mediterranean Basin in the World Petroleum Market 2000***

here s a work arriving just at the right moment and contributing new insights at precisely the time when public opinion remains sceptical of the not very promising future we are preparing for our children when governments balk at explaining to their electorates the vital but unpopular decisions that have to be taken and when civil society with few ways and

means is finally becoming involved this remarkable work will help all actors to understand the inter linkages between economic activities and the environment in the mediterranean basin and take concerted effective action to build a positive sustainable future mohamed ennabli former minister of the environment and land use panning tunisia the blue plan has carried out a remarkable assessment of the serious environmental problems and insufficiently targeted cooperation in the mediterranean and also of new financing systems to be implemented which would increase the capacities of local authorities and economic and social partners georges corm former minister of finance lebanon the mediterranean basin and its surrounding countries is a microcosm of the environmental and sustainability challenges facing people across the world depending on the development path it takes in the future the region can either become a positive model for the regional regulation of globalization or more onerously it might reinforce global instability this unique volume is the definitive authoritative assessment of the environment and development of the mediterranean basin and its 22 countries and territories spanning five decades from 30 years in the past to 20 years into the future produced by the blue plan within the framework of unep mediterranean action plan and backed by the eu and national governments it brings together the work of more than 100 researchers from dozens of national regional and local governments and research groups into the only comprehensive insight into sustainable

development issues in the region core coverage includes water energy transport cities rural and coastal areas as well as related issues such as climate change population growth geopolitical changes unemployment and poverty pollution economic and environmental policies regional cooperation and the euro mediterranean partnership information is clearly presented through hundreds of full colour maps graphs tables and a wealth of case studies this is a must have reference for all levels of government ngos and libraries as well as practitioners academics and businesses involved in economics natural resource management land and maritime transport water energy infrastructure urban and rural development agriculture fishing and aquaculture tourism and coastal management countries and territories covered spain france italy monaco malta cyprus slovenia croatia bosnia herzegovina serbia and montenegro albania greece turkey syria lebanon palestinian territories israel egypt libya tunisia algeria and morocco preface by lucien chabason chairman of the blue plan

## **A Sustainable Future for the Mediterranean 2012-08-21**

the mediterranean basin with its mountainous shores high biodiversity and spectacular scenery is located at the intersection of africa and eurasia through the 8000 years of human development in this area there have been tremendous changes in its history and

biogeography approximately 300 million people live here today although the evergreen maquis vineyards olive plantations and natural woodlands cover the lands all over the basin it is facing severe destruction of habitats due to deforestation intensive grazing fires and in particular a severe coastal degradation due to infrastructure development which is changing the landscape both the historical heritage and geography of the land is facing a great threat due to urbanisation and fragmentation time has come for its inhabitants to weigh their impact on its ecogeography in order to save the biodiversity as well as the history of the basin this book synthesises the knowledge from different disciplines so as to increase awareness among the humans in the basin

## **Environment and Ecology in the Mediterranean Region**

### **2012-03-15**

in view of the massive change in the area of distribution of many world biota across classical biogeographical realms and of the drastic restructuring of the biotic components of numerous ecosystems the scientific committee on problems of the environment scope decided at its general assembly in ottawa canada in 1982 to launch a project on the ecology of biological invasions several regional meetings were subsequently organized within the framework of scope in order to single out the peculiarities of the invasions

a core textbook series that aims to provide students with accessible up to date accounts of ecogeography the marriage of ecology with geography in the primary terrestrial and marine environments this is the first book in the series on mediterranean ecogeography biological diversity in the mediterranean basin is amongst the highest of any region on earth both in terms of total species numbers and endemism the flora is estimated at about 25 000 species of flowering plants and ferns compared with about 6000 species in non mediterranean europe about 50 of these are endemic diversity amongst vertebrate animals is also high though endemism rates are lower than for plants the high levels of diversity contribute to and are a reflection of the considerable variability of landscape this results from a combination of factors including geological and tectonic history relief and physiography climate geomorphological processes hydrology soils the incidence of fires and impact of human activities the landscapes of the mediterranean basin are thus varied and fragmented a mosaic of ecosystems and communities mediterranean ecogeography aims to examine and explain this heterogeneity and the approach is focused on the ecogeography of the region analysing the factors which account for the present distributions of plants and animals and the functioning of ecosystems within the mediterranean basin can help in the understanding of the relationship between people and natural ecosystems a key to the

conservation of these ecosystems is the wise use of resources biological and physical in addition it is vital to assess how the natural environments of the region will respond to further change in the last twenty years understanding of the functioning of mediterranean type ecosystems has advanced through several international projects this book draws upon the findings of these and other research in the mediterranean basin to present a comprehensive text on a key region of the world and the problems and prospects of its environmental exploitation

## **Emigration and agriculture in the Mediterranean basin**

**2019-03-18**

the mediterranean region contains a diverse and interesting climate ranging from areas with permanent glaciers to areas of subtropical semiarid regions the region is potentially sensitive to climate change and its progress has environmental social and economic implications within and beyond the region produced by the mediterranean climate variability and predictability research networking project this book reviews the evolution of the mediterranean climate over the past two millennia with projections further into the twenty first century as well as examining in detail various aspects of the mediterranean region s climate including evolution atmospheric variables and oceanic and land elements integrated with this the book also

## ***Recent Dynamics of the Mediterranean Vegetation and Landscape 2004-10-22***

this book is focused on the challenges to implement sustainability in diverse contexts such as agribusiness natural resource systems and new technologies the experiences made by the researchers of the school of agricultural forestry food and environmental science safe of the university of basilicata offer a wide and multidisciplinary approach to the identification and testing of different solutions tailored to the economic social and environmental characteristics of the region and the surrounding areas basilicata s productive system is mainly based on activities related to the agricultural sector and exploitation of natural resources but it has seen in recent years an industrial development driven by the discovery of oil fields safe research took up the challenge posed by market competition to create value through the sustainable use of renewable and non renewable resources of the territory moreover due to its unique geographical position in the middle of the mediterranean basin basilicata is an excellent open sky laboratory for

testing sustainable solutions adaptable to other mediterranean areas this collection of multidisciplinary case studies and research experiences from safe researchers and their scientific partners is a stimulating contribution to the debate on the development of sustainable techniques methods and applications for the mediterranean regions

## **Plant Life in the World's Mediterranean Climates 1998**

this volume explores the climates landscapes ecosystems and hazards that comprise the mediterranean world it traces the development of the mediterranean landscape over very long timescales and examines modern processes and key environmental issues in a wide range of settings the mediterranean is the only region on earth where three continents meet and this interaction has produced a very distinctive physical geography this book examines the landscapes and processes at the margins of these continents and the distinctive marine environment between them catastrophic earthquakes explosive volcanic eruptions and devastating storms and floods are intimately bound up within the history and mythology of the mediterranean world this is a key region for the study of natural hazards because it offers unrivalled access to long records of hazard occurrence and impact through documentary archaeological and geological archives the

mediterranean is also a biodiversity hotspot it has been a meeting place for plants animals and humans from three continents throughout much of its history the quaternary records of these interactions are more varied and better preserved than in any other part of the world these records have provided important new insights into the tempo of climate landscape and ecosystem change in the mediterranean region and beyond the region is unique because of the very early and widespread impact of humans in landscape and ecosystem change and the richness of the archaeological and geological archives that chronicle this impact this book examines this history and these interactions and places current environmental issues in long term context contributors ramadan husain abu zied harriet allen jacques blondel maria carmen llasat james casford marc castellnou andrew goudie andrew harding angela hayes tom holt babette hoogakker philip hughes jos lelieveld john lewin francisco lloret francisco lopez bermudez mark macklin jean margat anne mather Frédéric Médail christophe morhange clive oppenheimer jean palutikof gerassimos papadopoulos josep piñol david pyle jane reed neil roberts eelco rohling iain stewart stathis stiros john thornes chronis tzedakis john wainwright

## **Spain and the Mediterranean Since 1898 2013-09-13**

almost 20 years after the first medpine book ecology

biogeography and management of pinus halepensis and p brutia forest ecosystems in the mediterranean basin ne eman and trabaud 2000 was published this new book presents up to date and state of the art information covering a wide range of topics concerning mediterranean pine trees growing in native and planted forests their ecosystems and management this will be an essential source of scientific information for learning exploring planning and managing mediterranean pine and mixed forests we focus on genetics adaptation distribution and evolution ecophysiology and drought resistance pine and mixed forest ecosystems forest dynamics biodiversity and biotic interactions fire ecology ecosystem services and policy afforestation and management all under the effect of global climate change while forests are studied mainly in temperate and tropical zones in the light of current climate change focusing on mediterranean forests growing in semi humid to semi arid zones is more important than ever this book will include mostly review chapters and two outstanding case studies contributed by leading scientists foresters and managers and will serve as a scientific textbook for students of biology agriculture and forestry researchers of ecology forestry and related fields forest managers policy and decision makers

## **The Sustainability of Agro-Food and Natural Resource Systems in the Mediterranean Basin** **2015-04-24**

moving from a historical and cultural perspective this book examines the geo political and socio economic changes involving the enlarged mediterranean organised into two main sections the first section the new centrality of the mediterranean basin trends and dynamics is devoted to the analysis of the most relevant drivers and interdisciplinary broader issues and the second section hotspots of crisis and regional interferences in the mediterranean assesses the situation in some areas interested by the waves of uprisings since 2011 12 the book aims to uncover this new critical centrality of the mediterranean in the global scenario through the analysis of the interactions and intertwining of those trends and dynamics offering a historical holistic broad view what follows is an italian perspective that is the result of the research of a group of scholars who have been working for years on the first hand sources of the countries examined a peculiar vision connected not only to its unique geographical

position at the center of the basin but also to its deep relations with the southern shore throughout its long history

## **The Political Economy of the Mediterranean Basin 1980**

while the mediterranean basin biodiversity hotspot is well known for its globally important biodiversity its freshwater biodiversity has not been as widely recognized for its importance through this project freshwater key biodiversity areas kbas have now been identified mapped and validated throughout much of the mediterranean hotspot it is now important to raise awareness of their status as validated freshwater kbas and to develop plans for appropriate conservation actions at these sites as this biodiversity is highly threatened largely due to the conflicting demands upon a diminishing supply of fresh water which is further exacerbated by the increased severity of drought across the region

## ***The Physical Geography of the Mediterranean 2009-05-07***

this book serves the purpose of showcasing some of the works in respect of applied research field projects and best practice to foster climate change adaptation across the region climate change is having a much greater impact in the mediterranean than the global

average in the paris climate agreement the un member states pledged to stop global warming at well below two degrees if possible at 1.5 degrees this mark which is expected elsewhere only for 2030 to 2050 has already been reached in the region the situation could worsen in the coming years if the global community does not limit its emissions the above state of affairs illustrates the need for a better and more holistic understanding of how climate change affects countries in the mediterranean region on the one hand but also on the many problems it faces on the other which prevent adaptation efforts there is also a perceived need to showcase successful examples of how to duly address and manage the many social economic and political problems posed by climate change in the region in order to replicate and even upscale the successful approaches used it is against this background that the book climate change in the mediterranean and middle eastern region has been produced it contains papers prepared by scholars practitioners and members of governmental agencies undertaking research and or executing climate change projects and working across the region
