The Future: A Very Short Introduction 2017-03-13

from the beginning of time humans have been driven by both a fear of the unknown and a curiosity to know we have always yearned to know what lies ahead whether threat or safety scarcity or abundance throughout human history our forebears tried to create certainty in the unknown by seeking to influence outcomes with sacrifices to gods preparing for the unexpected with advice from oracles and by reading the stars through astrology as scientific methods improve and computer technology develops we become ever more confident of our capacity to predict and quantify the future by accumulating and interpreting patterns form the past yet the truth is there is still no certainty to be had in this very short introduction jennifer gidley considers some of our most burning questions what is the future is the future a time yet to come or is it a utopian place does the future have a history is there only one future or are there many possible futures she asks if the future can ever be truly predicted or if we create our own futures both hoped for and feared by our thoughts feelings and actions and concludes by analysing how we can learn to study the future about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

a work of political economy from the perspective of an anthropologist who has made a career of studying poverty and displaced people global threats global futures will prove rewarding reading for anyone concerned with issues of economic development

environmental and cultural degradation and the causes and solutions of poverty most of all thayer scudder illuminates a path not only possible but plausible through a destructive maze of humankind's own making if only the political will can be found to tread it engineering science thayer scudder is one of those gifted authors who have the experience and the vision to span multiple sectors and far flung sites in assessing where humankind and its habitat are heading his restless curiosity in everything around him has led him to become not simply the world's leading authority on the impacts on the lives of people resettled by dam building projects but an innovative thinker about development anthropology and the threats to the globe from poverty fundamentalism in all its pernicious forms and environmental degradation this iconoclastic book assails sacred cows ranging from the world bank to the malign role of buddhist priests in the late civil war in sri lanka the work is not reassuring but its conclusion that humans can learn to live with declining living standards is more uplifting than doom laden david mcdowell former director general of the iucn and new zealand ambassador to the united nations neither pollyanna nor prophet of doom professor scudder has drawn on his 55 years of international experience and presented a clear hard hitting extraordinarily well documented analysis of the critical and urgent global challenges that face humankind and of the transformations that will be required to meet those challenges this is a very important book it should be read by an informed public but most particularly by leaders and policy makers of the world's governments international organizations educational and religious institutions lee talbot george mason university us this is an extraordinary bold and exceptionally well thought out prospectus on the next century of the human condition declining living standards consequential to the pervasive pursuit of growth in terms of gross domestic product is a central theme that is thoroughly documented and engagingly articulated the decisive role in the decline of living standards played by global threats including poverty fundamentalism environmental degradation wars and excess consumption is compellingly presented from the perspective of the author's unique career burton singer princeton university us this impressive study of the progressive impoverishment of the world's resources speaks with the authority of thayer scudder's fifty years of experience with international programs for technological development especially those that involve river basin development and resulting population displacement and resettlement case studies from different continents provide the evidence for the likelihood that the majority in future generations will lead more meager lives than their twentieth century ancestors he points to what has gone wrong in our approach to the world and its resources and to the measures necessary to offset the damage already caused if only citizens have the political will to adopt them elizabeth colson university of california berkeley us this is an important book it has to be listened to and for two reasons the first is the expertise of the author the guy has been there this is an anthropologist who is constantly in the field and he possesses a wide range of skills part ethnographer part biologist as much a humanist as a scientist the combination of experience and expertise is as powerful as it is unusual sadly a second force in favor of this book is the temper of the times the giddiness of the last century has been driven underground by the perils of this ro

eight varied scenarios integrating a quantitative model and qualitative analysis that examine the interplay of three key drivers over the next four decades this book presents eight varied scenarios of possible global futures emphasizing the interconnectedness of three drivers of change energy prices economic growth and geopolitics other published global future scenarios focus on only one of these factors viewing for example economic growth as unaffected by energy prices or energy

prices in isolation from geopolitical conditions in this book even hillebrand and stacy closson offer a new approach to scenario construction that acknowledges the codependence of these key drivers and integrates qualitative analysis with a quantitative model the eight scenarios represent possible combinations of high or low energy prices strong or weak economic growth and global harmony or disharmony across three time periods the 2010s 2020 to 2040 and 2040 to 2050 the regional mercantilism scenario for example envisions high energy prices weak economic growth and global disharmony to impose numerical consistency across scenarios hillebrand and closson employ the international futures ifs model developed by barry hughes interested readers can download this interactive model to alter or build scenarios themselves assessing the probability of each scenario they conclude that increased u s energy supply and the sustainability of the chinese growth miracle are the most significant drivers over the next forty years

providing critical assessment of the globalization thesis through sustained analysis of the nexus of processes underlying social and cultural relations this book examines explores and teases out the many contradictions embedded within different discourses of globalization together the various chapters in the collection offer a wide ranging critique of those accounts which represent globalization primarily if not exclusively as the classic story of european modernity with its attendant narratives of ostensibly unfettered movement of people unmitigated economic growth and social progress

Possible Futures Series 2011-05-01

the first three volumes of the series available for purchase as a set now the possible futures series gathers together leading social scientists to address the significance of the global economic crisis in a series of short accessible books each volume takes on the past present and future of this crisis suggesting that it has an informative history that the consequences could be much more basic than the stock market declines and that only fundamental changes not fiscal band aids can head off future repetitions contributors include immanuel wallerstein david harvey saskia sassen james kenneth galbraith manuel castells nancy fraser rogers brubaker david held mary kaldor vadim volkov giovanni arrighi beverly silver and fernando coronil volume i business as usual the roots of the global financial meltdown edited by craig calhoun and georgi derluguian much more basic than the result of a few financial traders cheating the system business as usual shows how the current financial crisis was made possible by both neoliberal financial reforms and a

massive turning away from manufacturing things of value to make profits from trading financial assets in original essays the contributors establish how the great recession is related to crises of the past and yet why this meltdown was different the volume concludes by asking whether the crisis despite its severity contains seeds of a new global economy what role the us will play and whether china or other countries will rise to global leadership volume ii the deepening crisis governance challenges after neoliberalism edited by craig calhoun and georgi derluguian response to financial meltdown is entangled with basic challenges to global governance environment global security ethnicity and nationalism are all global issues today focusing on the political and social dimensions of the crisis contributors examine changes in relationships between the world s richer and poorer countries efforts to strengthen global institutions and difficulties facing states trying to create stability for their citizens volume iii aftermath a new global economic order edited by craig calhoun and georgi derluguian the global financial crisis showed deep problems with mainstream economic predictions as well as the vulnerability of the world s richest countries and the enormous potential of some poorer ones china india brazil and other counties are growing faster than europe or america and have weathered the crisis better is their growth due to following conventional economic guidelines or to strong state leadership and sometimes protectionism these issues are basic to the question of which countries will grow in comind decades as well as the likely conflicts over global trade policy currency standards and economic cooperation

thriving in the 21st century humans have a unique capability to both understand their situation in the world and to envision and act to realise their aspirations in the emerging world and most of us would welcome knowing how we can become ever more skilful at both understanding and shaping the future of our emerging world so that we can thrive in it the 21st century is very different from the 20th century globalisation the greatest economic prosperity uplifting machine humanity has ever invented and mass education are combining to sweep humanity into an emerging interdependent global village it is creating a global educated middle class that will number 5 billion in 2030 in this emerging world a world where our future prosperity will be increasingly based on metaphysical wealth on what we know 20th century nation first competitive win lose mindsets and agendas can no longer work these now yesteryear mindsets will instead undermine our best endeavours including making our future ever more climate and pandemic safe humanity is now beginning to learn that it now has no option but to adopt planet first collaborative win win values and mindsets if it wishes to shape our emerging global village so that it can become liveable for all ever more prosperous harmonious inclusive sustainable healthy and secure meeting these challenges successfully will require that humanity innovates for itself a new future knowledge curriculum so that it can economically thrive in a sustainable and humane manner peter ellyard has asked the question what would be the contents of such a curriculum in the future knowledge compendium a curriculum for thriving in the 21st century he has sought to answer this question

The Future Knowledge Compendium 2023-03-03

2011 david easton award presented for the best book by the foundations of political theory section of apsa the future of democratic equality by joseph schwartz takes on three tasks and accomplishes all brilliantly any one of these tasks well fulfilled would have been a laudable achievement first schwartz argues for the centrality of the question of equality to democratic politics second he critically analyzes and explains the shocking rise in inequality in the united states over the last three decades this he does with conceptual clarity rich interdisciplinary analysis and a

thorough examination of hard socioeconomic data third he assails the near absence of concern for this soaring inequality among contemporary political theorists and offers a cogent and stinging explanation that takes to task the discipline's preoccupation with difference and identity severed from the pragmatics of democratic equality the future of democratic equality is a courageous and disciplined effort to tackle a hugely important political problem and intellectual puzzle it well embodies the spirit of the easton book award by providing well grounded normative theory targeted to an urgent matter of contemporary concern it is a must read for anyone who cares about democracy respectfully submitted by leslie paul thiele university of florida chair and cary j nederman texas a m university why has contemporary radical political theory remained virtually silent about the stunning rise in inequality in the united states over the past thirty years schwartz contends that since the 1980s most radical theorists shifted their focus away from interrogating social inequality to criticizing the liberal and radical tradition for being inattentive to the role of difference and identity within social life this critique brought more awareness of the relative autonomy of gender racial and sexual oppression but as schwartz argues it also led many theorists to forget that if difference is institutionalized on a terrain of radical economic inequality unjust inequalities in social and political power will inevitably persist schwartz cautions against a new radical theoretical orthodoxy that universal norms such as equality and solidarity are inherently repressive and homogenizing whereas particular norms and identities are truly emancipatory reducing inequality among americans as well as globally will take a high level of social solidarity a level far from today's fragmented politics in focusing the left's attention on the need to reconstruct a governing model that speaks to the aspirations of the majority schwartz provocatively applies this vision to such real world political issues as welfare reform race relations childcare and the democratic regulation of the global economy

The Future Of Democratic Equality 2008-10-31

this text explains the different models of democracy and the varied approaches taken by a number of international actors to promote or impose democratic and economic reform

it is difficult to find an area of public policy more plagued by misunderstanding than energy policy even worse every time the subject is raised we are obligated to get mired in pointless arguments about the weather this book helps set the record straight not convinced consider some of these inconvenient truths the cost of green energy climate remediation is anywhere from 10 to 1 000 times greater than the damage from the climate change it attempts to alleviate germany the world s leader in solar energy will spend more than 280 billion by 2030 on solar subsidies but all of that investment will only forestall 22nd century global warming by 37 hours obama s carbon tax would cost americans 1 2 trillion over just ten years but it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0 038 degrees celsius at their current emissions growth rate it will take china nine months to replace the entire u s emissions cut that obama wants to achieve over seven years at a staggering cost in american jobs and lost economic growth the u s biofuel program imposes a cost on consumers 9 862 times greater than any climate benefit they or their distant progeny will ever derive this is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail the world has too many pressing needs for the money obama squandered on just a single bankrupt crony solar company the u s could have prevented 300 000 childhood malaria deaths in poor countries a thoroughly researched heavily documented book by an expert in his field it will demonstrate in meticulous detail how wasteful and economically inefficient obama s green energy dead end future will be compared to other worthy alternatives it s time to end the hysterical climate cynicism and get on humanity s side
