

## Free read The 2009 influenza pandemic an overview [PDF]

influenza ward at walter reed hospital in washington d c during the 1918 flu pandemic an influenza pandemic is an epidemic of an influenza virus that spreads across a large region either multiple continents or worldwide and infects a large proportion of the population a flu pandemic is a global outbreak of a new flu a virus flu pandemics happen when a new novel flu a virus emerges that is able to infect people easily and spread from person to person in an efficient and sustained way and to which most of the world's population do not have immunity influenza pandemic of 1918 19 the most severe influenza outbreak of the 20th century and among the most devastating pandemics in human history the outbreak was caused by influenza type a subtype h1n1 virus learn about the origins spread and impact of the influenza pandemic of 1918 19 an influenza pandemic is a global outbreak of a new influenza a virus that is very different from current and recently circulating human seasonal influenza a viruses pandemics happen when new novel influenza a viruses emerge which are able to infect people easily and spread from person to person in an efficient and sustained way every year there are an estimated 1 billion cases of which 3 to 5 million are severe cases with 290 000 to 650 000 influenza related respiratory deaths worldwide reducing the impact of seasonal flu through better surveillance prevention and control helps countries prepare for a pandemic 13 may 2010 an influenza pandemic is a global epidemic caused by a new influenza virus to which there is little or no pre-existing immunity in the human population influenza pandemics are impossible to predict and they may be mild or cause severe disease or death global influenza programme the global influenza surveillance and response system gisrs continues to play an important role in the covid 19 pandemic response since its onset the systems established for influenza virus detection risk assessment and sharing of virus materials and data provide ready platforms to monitor the circulation of the influenza virus is a global threat to human health causing unpredictable yet recurring pandemics the last four emerging over the course of a hundred years as our knowledge of influenza the influenza pandemic of 1918 1919 killed more people than the great war known today as world war i ww1 at somewhere between 20 and 40 million people it has been cited as the most devastating epidemic in recorded world history abstract the 2018 2019 period marks the centennial of the spanish influenza pandemic which caused at least 50 million deaths worldwide the unprecedented nature of the pandemic's sudden appearance and high fatality rate serve as a stark reminder of the threat influenza poses we'll be in touch with health advice and latest findings to improve your health and wellbeing this spotlight focuses on the lessons we can learn from previous flu pandemics how prepared we are for another one and how work on seasonal flu can boost capacity for pandemic preparedness pandemic influenza occurs every 10 50 years and is characterized by the introduction of a new influenza a virus strain that is antigenically very different from previously circulating an influenza pandemic is a global outbreak of a new influenza a virus that is very different from current and recently circulating human seasonal influenza a viruses pandemics happen when new novel influenza a viruses emerge which are able to infect people easily and spread from person to person in an efficient and sustained way the flu or influenza is a highly contagious viral infection that mainly affects the respiratory system it's usually a seasonal illness with yearly outbreaks killing hundreds seasonal and pandemic influenza 100 years of progress still much to learn jake dunning ryan s thwaites peter j m openshaw mucosal immunology 13 566 573 2020 cite this article seasonal flu is a contagious illness caused by the influenza virus it kills an average of 700 000 people each year from respiratory disease or cardiovascular disease 1 in large pandemics when new strains have evolved the death toll has been much higher yet data on the flu is limited abstract influenza remains one of the major public health concerns because it causes annual epidemics and can potentially instigate a global pandemic mr barry a scholar at the tulane university school of public health and tropical medicine is the author of the great influenza the story of the deadliest pandemic in history in 1918 an guidelines for the prevention and control of pandemic influenza phase 4 onwards 1 introduction 2 guideline for quarantine system of pandemic influenza 3 guideline for the surveillance of pandemic influenza from phase 4 onwards 4 guideline for proactive epidemiological research of pandemic influenza pandemic phases 4 to 6 we effectively flew blind straight through chapters one and two of the covid 19 pandemic today genomic analyses tell us that bird flu had been circulating in dairy cows for at least four months
