Key Concepts and Issues in Nursing Ethics

2017-03-08

short case studies based on real stories from the health care arena ensure that each chapter of this book is rooted in descriptions of nursing practise that are grounded salient narratives of nursing care the reader is assisted to explore the ethical dimension of nursing practice what it is and how it can be portrayed discussed and analysed within a variety of practice and theoretical contexts one of the unique contributions of this book is to consider nursing not only in the context of the individual nurse patient relationship but also as a social good that is of necessity limited due to the ultimate limits on the nursing and health care resource this book will help the reader consider what good nursing looks like both within the context of limitations on resources and under conditions of scarcity indeed any discussion of ethical issues in nursing should be well grounded in a conceptualisation of nursing that nursing students and practising nursing can recognise accept and engage with nursing like medicine social work and teaching has a clear moral aim to do good in the case of nursing to do good for

the patient however it is vital that in the pressurised constrained health service of the 21st century we help nurses explore what this might mean for nursing practice and what can reasonably be expected of the individual nurse in terms of good nursing care

Decision-Making in Nursing *2014-03-07*

despite sustained debate and progress the evolving thing that is evidence based nursing or practice ebp continues to dangle a variety of conceptual and practical loose threads moreover when we think about what is being asked of students and registered or licenced practitioners in terms of ebp it is difficult not to concede that this ask is in many instances quite large and occasionally it may be unachievable ebp has and continues to improve patient client and user care yet significant questions concerning its most

basic elements remain unresolved and if nurses are to contribute to the resolution or reconfiguration of these questions then as a first step we must acknowledge their existence from a range of international standpoints and perspectives contributors to this book focus on aspects of ebp that require development this focus is always robust and at times it is unashamedly provocative contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of ebp while both conflict and concord are evident among the various offerings presented here the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts and across contributions a self assuredly critical stance towards ebp as currently practiced conceptualized and taught coexists alongside respectful admiration for all who make it happen exploring evidence based practice debates and challenges in nursing should be considered essential reading for academics and postgraduate students with an interest in evidence based practice and nursing research
