this book explores how lighting systems based on led sources have the ability to positively influence the human circadian system with benefits for health and well being the opening chapters examine the functioning of the human circadian system its response to artificial lighting potential health impacts of different types of light exposure and current researches in circadian photometry a first case study analyzes the natural lighting available in an urban interior concluding that it is unable to activate the human circadian system over the entire year important original research is then described in which systems suitable for artificial circadian lighting in residential interiors and offices were developed after testing of new design paradigms based on led sources readers will also find a detailed analysis of the led products available or under development globally that may contribute to optimal artificial circadian lighting as well as the environmental sensors control interfaces and monitoring systems suitable for integration with new led lighting systems finally guidelines for circadian lighting design are proposed with identification of key requirements

Circadian Lighting Design in the LED Era

2019-02-06

this book focuses on the theory and design methods for guidance navigation and control gnc in the context of spacecraft rendezvous and docking rvd the position and attitude dynamics and kinematics equations for rvd are presented systematically in accordance with several different coordinate systems including elliptical orbital frame and recommendations are supplied on which of these equations to use in different phases of rvd the book

subsequently explains the basic principles and relative navigation algorithms of rvd sensors such as gnss radar and camera type rvd sensors it also provides guidance algorithms and schemes for different phases of rvd including the latest research advances in rapid rvd in turn the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for rvd emphasis is placed on the design method of active and passive trajectory protection in different phases of rvd and on the safety design of the rvd mission as a whole for purposes of verification the shenzhou spacecraft s in orbit flight mission is introduced as well all issues addressed are described and explained from basic principles to detailed engineering methods and examples providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for gnc system design in rvd

Guidance, Navigation, and Control for Spacecraft Rendezvous and Docking: Theory and Methods

2021-02-16

this study traces the development of close air support tactics and operations in south vietnam from 1961 through 1973 the early years 1961 64 witnessed the buildup of farm gate operations and introduction of the tactical air control system barn door tactics evolved for the o 1 bird dog fac and for such strike aircraft as the t 28 trojan b 26 invader and a le skyraider ordnance problems were tackled and headway made during the buildup 1965 68 the o 2a skymaster and ov 10 bronco bolstered forward air control strike operations were strengthened by the f 100 super sabre b 57 canberra f 4 phantom f 5 freedom fighter and a 37 dragonfly gunships the ac 47 spooky ac 130 spectre ac 119g shadow and ac 119k stinger also gave excellent assistance to group troops support of special forces commenced inroads were made on problems of coordination command

and control of tactical air power tactics were further refined to meet the changing needs of close air support in the final period 1969-73 the OV-10 acted as an armed FAC the A-7 Corsair II entered the war in 1973 the pullout of American troops began lastly the study discusses the A-10 close air support aircraft

developments in data acquisition technologies digital information and analysis automated construction processes and advanced materials and products have finally started to move the construction industry traditionally reluctant to innovation and slow in adopting new technologies toward a new era massive changes are occurring because of the possibilities created by building information modeling extended reality internet of things artificial intelligence and machine learning big data nanotechnology 3D printing and other advanced technologies which are strongly interconnected and are driving the capabilities for much more efficient construction at scale construction 4.0 advanced technology tools and materials for the digital transformation of the construction industry provides readers with a state of the art review of the ongoing digital transformation of the sector within the new 4.0 framework presenting a thorough investigation of the emerging trends technologies and strategies in the fields of smart building design construction and operation and providing a comprehensive guideline on how to exploit the new possibilities offered by the digital revolution it will be an essential reference resource for academic researchers material scientists and civil engineers undergraduate and graduate students and other professionals working in the field of smart ecoefficient construction and cutting edge technologies applied to construction provides an overview of the construction 4.0 framework to address the global challenges of the building sector in the 21st century and an in depth analysis of the most advanced digital technologies and systems for the operation and maintenance of infrastructure real estate and other built

assets covers major innovations across the value chain including building design fabrication construction operation and maintenance and end of life illustrates the most advanced digital tools and methods to support the building design activity including generative design virtual reality and digital fabrication presents a thorough review of the most advanced construction materials building methods and techniques for a new connected and automated construction model explores the digital transformation for smart energy buildings and their integration with emerging smart grids and smart cities reflects upon major findings and identifies emerging market opportunities for the whole aeco sector

the evaluation of reproductive maternal newborn and child health rmnch by the disease control priorities third edition dcp3 focuses on maternal conditions childhood illness and malnutrition specifically the chapters address acute illness and undernutrition in children principally under age 5 it also covers maternal mortality morbidity stillbirth and influences to pregnancy and pre pregnancy volume 3 focuses on developments since the publication of dcp2 and will also include the transition to older childhood in particular the overlap and commonality with the child development volume the dcp3 evaluation of these conditions produced three key findings 1 there is significant difficulty in measuring the burden of key conditions such as unintended pregnancy unsafe abortion nonsexually transmitted infections infertility and violence against women 2 investments in the continuum of care can have significant returns for improved and equitable access health poverty and health systems 3 there is a large difference in how rmnch conditions affect different income groups investments in rmnch can lessen the disparity in terms of both health and financial risk
