thomas sheehan and richard e palmer the materials translated in the body of this volume date from 1927 through 1931 the encyclopaedia britannica article and the amsterdam lectures were written by edmund hussed with a short contribution by martin heidegger between september 1927 and april 1928 and hussed s marginal notes to sein und zeit and kant und das problem der metaphysik were made between 1927 and 1929 the appendices to this volume contain texts from both hussed and heidegger and date from 1929 through 1931 as a whole these materials not only document hussed s thinking as he approached retirement

and emeritus status march 31 1928 but also shed light on the philosophical chasm that was widening at that time between husserl and his then colleague and protege martin heidegger 1 the encyclopaedia britannica article between september and early december 1927 husserl under contract composed an introduction to phenomenology that was to be published in the fourteenth edition of the encyclopaedia britannica 1929 husserl's text went through four versions which we call drafts a b c and d and two editorial condensations by other hands which we call drafts e and f throughout this volume those five texts as a whole are referred to as the eb article or simply the article husserl's own final version of the article draft d was never published of it appeared only in 1962

this paper studies the mod 2 cohomology $h^*(x)$ of finite h spaces it is shown that when x is connected and simply connected then $h^*(x)$ has no indecomposables of even degree as a consequence $h^*(\Omega)$ $h^*(x)$ bold z and $h^*(k)$ $h^*(x)$ have no 2 torsion the main result is proved by using morava script k theory

using concepts from valuation theory we obtain a characterization of all collinearity preserving functions from one affine or projective desarguesian plane into another the case in which the planes are projective and the range contains a quadrangle has been treated previously in the literature our results permit one or both planes to be affine and include cases where the range contains a triangle but no quadrangle a key theorem is that with the exception of certain embeddings defined on planes of order 2 and 3 every collinearity preserving function from one affine desarguesian plane into another can be extended to a collinearity preserving function between enveloping projective planes
