the economics of immigration summarizes the best social science studying the actual impact of immigration which is found to be at odds with popular fears greater flows of immigration have the potential to substantially increase world income and reduce extreme poverty existing evidence indicates that immigration slightly enhances the wealth of natives born in destination countries while doing little to harm the job prospects or reduce the wages of most of the native born population similarly although a matter of debate most credible scholarly estimates of the net fiscal impact of current migration find only small positive or negative impacts importantly current generations of immigrants do not appear to be assimilating more slowly than prior waves although the range of debate on the consequences of immigration is much narrower in scholarly circles than in the general public that does not mean that all social scientists agree on what a desirable immigration policy embodies the second half of this book contains three chapters each by a social scientist who is knowledgeable of the scholarship summarized in the first half of the book which argue for very different policy immigration policies one proposes to significantly cut current levels of immigration another suggests an auction market for immigration permits the third proposes open borders the final chapter surveys the policy opinions of other immigration experts and explores the factors that lead reasonable social scientists to disagree on matters of immigration policy

the world has never been richer than today the distribution of our global wealth however is hugely biased since 1980 the gains were mainly captured by the rich the top 1 obtained twice as much of the income growth as compared to the bottom 50 nevertheless within economics debates about inequality have remained rather marginal despite long term research by renowned scholars such as tony atkinson within the public arena concerns about inequality emerged as a result of a number of developments first the global financial crisis in 2008 exposed the risks of the financing of the economy secondly 2013 thomas picketty s book capital in the 21st century demonstrated that against the trend of the overall 20th century capital returns outstrip the gains through economic growth in recent decades thus threatening

social coherence and democratic institutions and thirdly the millennium campaign presented impressive achievements regarding poverty but stirred doubts whether the most deprived were left even further behind since 2015 then the stated aim of sdg 10 is to reduce inequality within and among countries there is growing consensus that economic growth is not sufficient to reduce poverty and that our efforts to make it more inclusive so far were insufficient the very first step reduce inequality is to adopt a systemic perspective allowing an integrative analysis covering both ends of the ladder policies should be universal in principle and pay attention to the needs of disadvantaged and marginalized populations predicated on comparison inequality reminds us that it s not enough to study lower earners and the poor instead the term demands that we expand our perspective scrutinizing how economic value is generated accumulated at whose cost and not least how the overall system could be made fairer transitioning to reduced inequalities therefore explores inequality trends worldwide offers a debate on different measures and comparative perspectives highlights key actors who either benefited or suffered from recent economic trends and explores policy options to reduce inequality and thus contribute to sdg 10 the volume considers particularly conceptual frameworks with regards to the inequality debate the relationship between poverty reduction economic growth and inequality measures of inequality overlooked bypassed groups in developing countries analysis on income wealth growth for different groups in the global north discussion about policies to reduce inequality and further research in the realm of inequality transitioning to reduced inequalities is part of mdpi s new open access book series transitioning to sustainability with this series mdpi pursues environmentally and socially relevant research which contributes to efforts toward a sustainable world

refugees have rarely been studied by economists despite some pioneering research on the economic lives of refugees there remains a lack of theory and empirical data through which to understand and build upon refugees own engagement with markets yet understanding these economic systems may hold the key to rethinking our entire approach to refugee assistance if we can improve our knowledge of the resource allocation systems that shape refugees lives and opportunities then we may be able to understand the mechanisms through which these market based systems can be made to work better and turn humanitarian challenges into sustainable opportunities this book adopts an inter disciplinary approach based on original qualitative and quantitative data on the economic life of refugees in order to begin to build theory on the economic lives of refugees it focuses on the case of uganda because it represents a relatively positive case unlike other governments in the region it has taken the positive step to allow refugees the right to work and a significant degree of freedom of movement through it so called self reliance strategy this allows a unique opportunity to explore what is possible when refugees have basic economic freedoms the book shows that refugees have complex and varied economic lives often being highly entrepreneurial and connected to the global economy the implications are simple but profound far from being an inevitable burden refugees have the capacity to help themselves and contribute to their host societies if we let them
