A Course in Ordinary Differential Equations - Solutions Manual *2007-07*

this complementary text provides detailed solutions for the problems that appear in chapters 2 to 18 of computational techniques for fluid dynamics ctfd second edition consequently there is no chapter 1 in this solutions manual the solutions are indicated in enough detail for the serious reader to have little difficulty in

completing any intermediate steps many of the problems require the reader to write a computer program to obtain the solution tabulated data from computer output are included where appropriate and coding enhancements to the programs provided in ctfd are indicated in the solutions in some instances completely new programs have been written and the listing forms part of the solution all of the program modifications new programs and input output files are available on an ibm compatible floppy direct from c a j fletcher many of the problems are substantial enough to be considered mini projects and the discussion is aimed as much at encouraging the reader to explore ex tensions and what if scenarios leading to further dcvelopment as at providing neatly packaged solutions indeed in order to givc the reader a better intro duction to cfd reality not all the problems do have a happy ending some suggested extensions fail but the reasons for the failure are illuminating
