2004-06-24 for the ordinary soldier the non commissioned officer and the junior officer the large proportion of the lower strata in military organisations the expectations of levels of responsibility and decision making are rapidly increasing in 1999 us marine corps general charles c krulak addressed this in his essay the strategic corporal leadership in the three block war which described the range of challenges likely to be faced by marines on the modern battlefield and where a range of operations fighting peace works and humanitarian assistance might occur simultaneously within a very limited precinct three blocks the chapters in this book use the metaphor of the strategic corporal to focus on the demands facing junior leaders in military operations in the twenty first century and what might be done to enhance their ability to respond to them the circumstances in which these decisions are made need to be better understood by soldiers and their critical onlookers be they villagers on the scene senior military or political leaders remote from the operation or anti war activists thousands of miles away being strategic is not just about a soldier s professional mastery increasingly it also means a genuine familiarity with legal and ethical issues and an ability in low intensity conflict to understand local culture and communicate with those in villages and neighbourhoods whose goodwill or at least neutrality are vital to ultimate success in the non war circumstances in which many western militaries operate such as humanitarian assistance and disaster relief as well as peacekeeping operations it means dealing with civil authorities in the distribution of aid or even the administration of justice if local institutions have broken down sometimes it involves negotiation and mediation it may even mean having an understanding of the ways pervasive modern media works and its potential to surveil and sometimes derail a mission sometimes it also means having a better understanding of the challenges that face the soldier s own defence force including the malign effects of bureaucratic inertia and the outsourcing of key capabilities to private contractors the book combines theoretical discussions with practical examples but it is not as so many books about future conflict are a discussion of the technology of future war rather it provides opportunities for specialists in a range of security related fields to consider the issues and challenges of military leadership the role of civilians and contractors the importance of international humanitarian law and even whether strategic gains can be made without the deployment of troops strategic corporals or otherwise

2017/18 Social Accounting Matrix for India 2020-12-05 this book challenges the unacceptable gap between the positive rules of the international law governing armed hostilities and actual state practice it discusses reducing the human suffering caused by this reality the current law does not seem to be optimal in balancing the different interests of states militaries and the humanitarian agenda in response to this challenge this book offers a new paradigm based on reality that may elevate the humanitarian threshold by replacing the currently problematic imperatives imposed upon militaries with professionally based therefore attainable requirements the aims of the suggested paradigm are to create an environment in which full abidance by the law becomes a realistic norm thus

facilitating a second more important aim of reducing human suffering militaries function in a professional manner they develop and respect their doctrine operational principles fighting techniques and values their performances are not random or incidental the suggested paradigm calls for leveraging the constraining elements that are latent in military professionalism talking professional language and adopting the professional way of thinking that underlies militaries conduct makes it possible to identify and focus upon the core interests of a military in any given lawful war those that ought to be taken into consideration alongside those that can be sacrificed for the sake of the humanitarian concerns while still allowing the military mission to be achieved indeed leveraging professional standards and norms would establish a reasonable *modus vivendi* for a military while allowing substantial new space for the humanitarian mission of the law

Air Pollution Abstracts 1972 given the centrality of hague law to the lawful prosecution of warfare the relative paucity of dedicated works is surprising the general formulation of hague law rules is largely uncontroversial but this clarity stands in stark contrast to their interpretation and practical application how precisely for instance the fundamental rules of distinction and proportionality in attack are to dictate and constrain the planning and practice of warfare continues to be highly uncertain this important new publication fills the gap in the literature offering a comprehensive assessment of hague law it explores questions of definitions and accountability and navigates the substantive rules and their application to different types of warfare

Help Me! Guide to the Nexus 7 FHD 2013-08-30 over the past twenty five years significant changes in the conduct of wars have increasingly placed civilians in traditional military roles employing civilians to execute drone strikes the targeted killing of suspected terrorists the use of private security contractors in combat zones and the spread of cyber attacks under the laws of armed conflict civilians cannot be targeted unless they take direct part in hostilities once civilians take action they become targets this book analyses the complex question of how to identify just who those civilians are identifying the enemy examines the history of civilian participation in armed conflict and how the law has responded to such action it asks the crucial question what is direct participation in hostilities the book slices through the attempts to untie this gordian knot and shows that the changing nature of warfare has called into question the very foundation of the civilian military dichotomy that is at the heart of the law of armed conflict

Impacts of the Proposed Waters of the United States Rule on State and Local Governments and Stakeholders 2015 over recent decades international humanitarian law has been shaped by the omnipresence of so called expert manuals astute and engaging this discerning book provides a comprehensive account of these black letter rules and commentaries produced by private expert groups and demonstrates why the general acceptance of these expert manuals is largely unjustified the author innovatively links interdisciplinary insights to the needs of military lawyers in practice showing the pitfalls of relying on private manuals as arguable restatements and interpretations of the law as it is

Hague Law Interpreted 2018-11-15 the high civilian death toll in modern protracted conflicts such as those in syria or iraq indicate the limits of international law in offering protections to civilians at risk a recent conference of states convened by the international committee of the red cross referred to an institutional vacuum in the area of international humanitarian law implementation yet both international humanitarian law and the law of human rights establish a series of rights intended to protect civilians but which law or laws apply in a particular situation and what are the obstacles to their implementation how can the law offer greater protections to civilians caught up in new methods of warfare such as drone strikes or targeted by new forms of military organisation such as transnational armed groups can the implementation gap be filled by the growing use of human rights courts to remedy violations of the laws of armed conflict or are new instruments or mechanisms of civilian legal protection needed this volume brings together contributions from leading academic authorities and legal practitioners on the situation of civilians in the grey zone between human rights and the laws of war the chapters in part 1 address key contested or boundary issues in defining the rights of civilians or non combatants in today's conflicts those in part 2 examine remedies and current mechanisms for redress both at the international and national level and those in part 3 assess prospects for the development of new mechanisms for addressing violations as military intervention to protect civilians remains contested this volume looks at the potential for developing alternative approaches to the protection of civilians and their rights

Socialist Thought and Practice 1976 both theoretical and empirical social science approaches to manual work in developing countries emphasize the infusions of power in social relations between workers and employers but little attention has been paid to either the lived experiences of non industrial and industrial manual workers or to the particularly physical character of their work in embodied working lives louise waite contributes to an expanded understanding of both the concept of embodiment recognizes that bodies habitual relations with the world engender subjectivities and life experiences the most careful consideration of everyday embodiment is found in the phenomenological tradition that theorizes incarnated consciousness and embodied subjectivities this book follows such an understanding of embodiment whose essence is to bridge the biological and the social waite incorporates embodiment into an ethnographic exploration of the worker understood in her study to have personhood

preferences and desires which play a part in social relations waite s situates the subjects of her study in a deeply dense context of social relations that sufficiently complicate our understanding of culture work bodies and embodiment phenomenology anthropology and habit this book is essential reading across the social sciences and in the humanities it is a groundbreaking ethnography that raises interesting questions in applied phenomenology humanist philosophies and also policy studies

Identifying the Enemy 2015-07-23 this book delves into legal and ethical concerns over the increased weaponization of outer space and the potential for space based conflict in the very near future unique to this collection is the emphasis on questions of ethical conduct and legal standards applicable to military uses of outer space no other existing publication takes this perspective nor includes such a range of interdisciplinary expertise the essays included in this volume explore the moral and legal issues of space security in four sections part i provides a general legal framework for the law of war and peace in space part ii tackles ethical issues part iii looks at specific threats to space security part iv proposes possible legal and diplomatic solutions with an expert author team from north american and europe the volume brings together academics military lawyers military space operators aerospace industry representatives diplomats and national security and policy experts the experience of this team provides a collection unmatched in any academic publication broaching even some of these issues and will be required reading for anyone interested in war and peace in outer space

CCNA Data Center DCICT 640-916 Official Cert Guide 2015-02-12 this book looks at why international law continues to make the legal distinction between persons who participate in an international or an internal armed conflict and drawing on considerable legal precedent legal theory and the situation in guantanamo bay it argues that it is time for the law of armed conflict to be applied more uniformly

Gnomes of Suburbia 2009-03-15 antonio gramsci is one of the few marxist theoreticians to have considered the role and nature of education yet paradoxically his revolutionary political and social theory seems at odds with his conservative approach to the content and processes of schooling this book originally published in 1979 examines his educational political and cultural writings in an effort to resolve this apparent discrepancy gramsci s relevance lies in his treatment in the context of his radical political theory of themes which currently exercise modern radical educationists among the subjects he discusses are the sociology of the curriculum the apparent discontinuity between the culture of school and that of daily life problems of literacy and language in education the role of the state in the provision of education the cultivation of elites and the role of intellectuals the relative functions of authority and spontaneity in education and the ambiguous relationship of these to differing political ideologies particularly fascism
