a stimulating and innovative consideration of the concept causes and practice of peace in societies both ancient and modern human and primate we know a great deal about aggression conflict and war but relatively little about peace partially because it has been such a scarce phenomenon throughout history and in our own times peace is more than the absence of war peace requires special relationships structures and attitudes to promote and protect it a natural history of peace provides the first broadly interdisciplinary examination of peace as viewed from the perspectives of social anthropology primatology archeology psychology political science and economics among other notable

features this volume offers a major theory concerning the evolution of peace and violence through human history an in depth comparative study of peaceful cultures with the goal of discovering what it is that makes them peaceful one of the earliest reports of a new theory of the organization and collapse of ancient maya civilization a comparative examination of peace from the perspective of change including the transition of one of the world s most violent societies to a relatively peaceful culture and the decision making process of terrorists who abandon violence and a theory of political change that sees the conclusion of wars as uniquely creative periods in the evolution of peace among modern nations

inbreeding the mating of close kin and outbreeding the mating of distant relatives or unrelated organisms have long been important subjects to evolutionary biologists inbreeding reduces genetic diversity in a population increasing the likelihood that genetic defects will become widespread and

deprive a population of the diversity it may need to cope with its environment most plants and animals have evolved behavioral and morphological mechanisms to avoid inbreeding however today many endangered species exist only in small very isolated populations where inbreeding is unavoidable so it has become a concern for conservationists in this volume twenty six experts in evolution behavior and genetics examine the causes and consequences of inbreeding the authors ask whether inbreeding is as problematic as biologists have thought under what ecological conditions inbreeding occurs and whether organisms that inbreed have mechanisms to dampen the anticipated problems of reduced genetic variation the studies including theoretical and empirical work on wild and captive populations demonstrate that many plants and animals inbreed to a greater extent than biologists have thought with variable effects on individual fitness graduate students and researchers in evolutionary biology animal behavior ecology and conservation biology will welcome this wide ranging collection

a star curator at the american museum of natural history widens the palette and shows how the physical natural and cultural context of color are inextricably tied to what we see right before our eyes is color a phenomenon of science or a thing of art over the years color has dazzled enhanced and clarified the world we see embraced through the experimental palettes of painting the advent of the color photograph technicolor pictures color printing on and on a vivid and vibrant celebrated continuum these turns to represent reality in living color echo our evolutionary reliance on and indeed privileging of color as a complex and vital form of consumption classification and creation it s everywhere we look yet do we really know much of anything about it finding color in stars and light examining the system

of classification that determines survival through natural selection studying the arrival of color in our universe and as a fulcrum for philosophy desalle s brilliant a natural history of color establishes that an understanding of color on many different levels is at the heart of learning about nature neurobiology individualism even a philosophy of existence color and a fine tuned understanding of it is vital to understanding ourselves and our consciousness

a masterful and compulsively readable book that challenges our preconceived notions about a behavior often sensationalized in our culture and until just recently misunderstood in the scientific world ian tattersall curator emeritus american museum of natural history and author of the strange case of the rickety cossack for centuries scientists have written off cannibalism as a bizarre

phenomenon with little biological significance its presence in nature was dismissed as a desperate response to starvation or other life threatening circumstances and few spent time studying it a taboo subject in our culture the behavior was portrayed mostly through horror movies or tabloids sensationalizing the crimes of real life flesh eaters but the true nature of cannibalism the role it plays in evolution as well as human history is even more intriguing and more normal than the misconceptions we ve come to accept as fact in cannibalism a perfectly natural history zoologist bill schutt sets the record straight debunking common myths and investigating our new understanding of cannibalism s role in biology anthropology and history in the most fascinating account yet written on this complex topic schutt takes readers from arizona s chiricahua mountains where he wades through ponds full of tadpoles devouring their siblings to the sierra nevadas where he joins researchers who are shedding new light on what happened to the donner party the most infamous episode of cannibalism in american history he even meets with an expert on the preparation and consumption of human placenta and yes it goes well with chianti bringing together the latest cutting edge science schutt answers

i love puzzles and finding answers is the only truly enjoyable part of what i do professor patricia wiltshire is a forensic ecologist her days spent at crime scenes collecting samples standing over dead bodies in a mortuary or looking down her microscope for evidence working at the interface of where the criminal and natural world interact patricia has been involved in some of the most high profile murder cases now through a study of her most infamous and fascinating cases including the murder of sarah payne and the soham murders of holly wells and jessica chapman patricia will show us how she

finds the answers to some of the worst crimes imaginable not only does she help the police solve crimes and give answers to the most bemusing circumstances she can help to exonerate the innocent and enable confessions from the guilty in the natural history of crime we join patricia in putting the puzzle together teasing the evidence out of her cases and showing us all how life and death have always been and always will be intertwined nature has given us a messy imperfect world but her job is to help make sense of it when we need it to most
