insurance constitutes a significant part of the financial services sector and is one of the foundations of modern economy and society in the design of tax laws however whether and how to tax insurance is a complex issue that has become particularly controversial in the area of value added tax vat in the european union as in most of the world insurance is exempt from vat but new zealand and australia do not follow this practice given that new zealand s simple comprehensive goods and services tax gst called the world s purest value added tax and its modified australian version do not appear to suffer from the shortcomings in efficiency and effectiveness that plague european vat a comparison of the two systems is in order this book is not only the first comparative in depth study of the treatment of insurance in the two systems but also the first comprehensive legal research devoted to the treatment of insurance in eu vat published in english among the underlying issues and topics treated by the two systems covered are the following who has a right to deduct input vat in relation to supplies inherent in insurance arrangements and to what extent what constitutes a supply of insurance and consideration for such a supply what transactions fall

within the scope of the vat directive s exemption for insurance and drawing a line between insurance and saving the analysis is grounded in a methodology in which concepts of european vat are compared with concepts performing the same function in the australian and new zealand gst laws the author concludes with proposals for reform in eu vat in the light of experience in these two major non eu countries given that it has been proven that exemptions from vat such as insurance cause a significant number of economic distortions and inefficiencies this study represents a major contribution to a topical debate in european vat law it will be welcomed by taxation authorities interested policymakers practitioners and scholars not only in europe but worldwide

since their inception the perspectives in logic and lecture notes in logic series have published seminal works by leading logicians many of the original books in the series have been unavailable for years but they are now in print once again logicism as put forward by bertrand russell was predicated on a belief that all of mathematics can be deduced from a very small number of fundamental logical principles in this

volume the twenty third publication in the lecture notes in logic series paul c gilmore revisits logicism in light of recent advances in mathematical logic and theoretical computer science gilmore addresses the need for languages which can be understood by both humans and computers and using intensional type theory itt provides a unified basis for mathematics and computer science this yields much simpler foundations for recursion theory and the semantics of computer programs than those currently provided by category theory
