scientists working in the field of biomedical and health informatics from all continents to gather and exchange research findings and experience the title of the 2023 conference was healthcare transformation with informatics and artificial intelligence reflecting the importance of ai to healthcare informatics a total of 252 submissions were received by the program committee of which 149 were accepted as full papers 13 as short communications and 14 as poster papers after review the papers cover a wide range of technologies and topics include imaging sensors biomedical equipment and management and organizational aspects as well as legal and social issues the book provides a timely overview of informatics and technology in healthcare during this time of extremely fast developments and will be of interest to all those working in the field generally welding produces welding deformation and residual stress in the products which influences the quality and performance of the products although many engineers and researchers have made great effort how to control these incidents they have still remained unresolved welding deformation and residual stress prevention provides a unique computational approach to the prediction of the effects of deformation and residual stress on materials the goal is to provide engineers and designers with the ability to create their own computational system for predicting and possibly avoiding the problem altogether the basic theories including theory of elastic plastic analysis and inherent strain theory and analysis procedures are described using a simple three bar model online simulation software to perform basic analysis on welding mechanics examples of strategic methods and procedures are illustrated to have solved various welding related problems encountered in the process of construction appendices present data bases for welding residual stresses temperature dependent material properties etc
