Equivalence and Mutual Recognition in Trade Arrangements 2005-04 understanding sustainable architecture is a review of the assumptions beliefs goals and bodies of knowledge that underlie the endeavour to design more sustainable buildings and other built developments much of the available advice and rhetoric about sustainable architecture begins from positions where important ethical cultural and conceptual issues are simply assumed if sustainable

~~architecture is to be a truly meaningful pursuit then it must be grounded in a coherent~~
theoretical framework this book sets out to provide that framework through a series of self
reflective questions for designers the authors argue the ultimate importance of reasoned
argument in ecological social and built contexts including clarity in the problem framing and
linking this framing to demonstrably effective actions sustainable architecture then is seen
as a revised conceptualisation of architecture in response to a myriad of contemporary
concerns about the effects of human activity the aim of this book is to be transformative by
promoting understanding and discussion of commonly ignored assumptions behind the search for a
more environmentally sustainable approach to development it is argued that design decisions
must be based on both an ethical position and a coherent understanding of the objectives and
systems involved the actions of individual designers and appropriate broader policy settings
both follow from this understanding
