more than 5 800 military personnel mostly navy personnel and marines participated in a series of tests of u s warship vulnerability to biological and chemical warfare agents project shad shipboard hazard and defense in the period 1962 1973 only some of the involved military personnel were aware of these tests at the time many of these tests used simulants substances with the physical properties of a chemical or biological warfare agent thought at the time to have been harmless the existence of these tests did not come to light until many decades later in september 2002 the institute of medicine iom agreed to undertake a scientific study funded by the veterans affairs of potential long term health effects of participation in project shad in general there was no difference in all cause mortality between project shad participants and nonparticipant controls although participants statistically had a significantly higher risk of death due to heart disease had higher levels of neurodegenerative medical conditions and higher rates of symptoms with no medical basis long term health effects of participation in project shad focuses on the potential health effects of participation in project shad it is a useful resource for government defense agencies scientists and health professionals between 1963 and 1969 the u s military carried out a series of tests termed project shad shipboard hazard and defense to evaluate the vulnerabilities of u s navy ships to chemical and biological warfare agents these tests involved use of active chemical and biological agents stimulants tracers and decontaminants approximately 5 900 military personnel primarily from the navy and marine corps are reported to have been included in project shad testing in the 1990s some veterans who participated in the shad tests expressed concerns to the department of veterans affairs va that they were experiencing health problems that might be the result of exposures in the testing these concerns led to a 2002 request from va to the institute of medicine iom to carry out an epidemiological study of the health of shad veterans and a comparison population of veterans who had served on similar ships or in similar units during the same time period in response to continuing concerns congress in 2010 requested an additional iom study this second study expands on the previous iom work by making use of additional years of follow up and some analysis of diagnostic data from medicare and the va health care system in the fall of 1962 at the height of the cold war officers representing the three main military services the army the navy and the air force arrived at the smithsonian institution in washington the officers were from the desert test center a new military installation in fort douglas utah the chapter describes how these officers outlined a biological survey of various pacific islands that they wanted to be undertaken they were not forthcoming with their motives in wanting the survey but smithsonian officials volunteered to perform the survey using their own scientists and others to be hired as needed whilst activities like transplantation and medical research have typically been considered on a discrete basis they are also actually part of a broader phenomenon of medical means being employed to make use of human beings this book is the first ever systematic critique of such medical use of the human being as a whole it is divided into two parts the first part considers what constitutes an appropriate normative lens through which to view such medical use and its constraint it makes a reasoned ethical and human rights based case for preferring respect for human worth over any of the main alternative approaches that have been drawn on in specific contexts and outlines what this preference practically implies the second part uses this respect based lens to critique use discourse law and practice drawing on three contrasting case study areas of warfare related medical use transplantation and human tissue research this book exposes both the context specific and thematic nature of shortfalls in respect overall this book provides a compelling analysis of how medical use ought to be constrained and a compelling critique of the excesses of discourse practice and governance it is recommended to academics students policymakers and professionals whose work is focused on or intersects with the medical sector and anyone else with an interest in medicine and its limits for over a quarter century biologist mark j rauzon worked in the field of island restoration traveling throughout the american insular pacific to eradicate invasive plants and animals introduced by humans the region spans from hawaii to samoa to guam and their neighbors small obscure tropical islands that are hundreds if not thousands of nautical miles from each other these little known us possessions and territories include various islands and atolls jarvis howland baker the northern marianas wake palmyra johnston and rose atoll among others they anchor a vast national marine monument program created in 2009 and expanded in 2014 to protect the largest area in the world from exploitation in isles of amnesia rauzon chronicles the ecological and human history of these islands enlivened with his first hand experiences of eradication efforts to restore atoll ecosystems and maximize native biodiversity each chapter focuses on an individual island or island group revealing how each location has its own particular story secret past or ecological lesson to be shared taken as a whole the region has played a unique role in american history with the remoteness of the islands having served the needs of whalers and guano miners in the 1800s and in later years that of military secret projects missile launching chemical weapon incinerations and air bases rauzon further explores the creation of the national marine monuments and what their protection means to a changing ocean and presents original research about the us military s pacific project and germ warfare testing illustrated with over seventy historical photographs and original drawings this much needed work tells the fascinating story of america s forgotten pacific islands this collection of essays looks at the dark medical research conducted during and after world however the u s military has neglected research development acquisition and doctrine for biodefense following september 11 and the anthrax letters of 2001 the united states started spending billions of dollars per year on medical countermeasures and biological detection systems but most of this funding now comes from the department of health and human services rather than the department of defense why has the u s military neglected biodefense and allowed civilian organizations to take the lead in defending the country against biological attacks in american biodefense frank l smith iii addresses this puzzling and largely untold story about science technology and national security smith argues that organizational frames and stereotypes have caused both military neglect and the rise of civilian biodefense in the armed services influential ideas about kinetic warfare have undermined defense against biological warfare the influence of these ideas on science and technology challenges the conventional wisdom that national security policy is driven by threats or bureaucratic interests given the ideas at work inside the u s military smith explains how the lessons learned from biodefense can help solve other important problems that range from radiation weapons to cyber attacks provides information on benefits and services for veterans covering such topics as healthcare the gi bill education benefits life insurance military pay overseas benefits and home loan guarantees in this important and revelatory book jonathan tucker a leading expert on chemical and biological weapons chronicles the lethal history of chemical warfare from world war i to the present at the turn of the twentieth century the rise of synthetic chemistry made the large scale use of toxic chemicals on the battlefield both feasible and cheap tucker explores the long debate over the military utility and morality of chemical warfare from the first chlorine gas attack at ypres in 1915 to hitler s reluctance to use nerve agents he

believed incorrectly that the u s could retaliate in kind to saddam hussein s gassing of his own people and concludes with the emergent threat of chemical terrorism moving beyond history to the twenty
