have historically relied upon the satisfaction of human needs as a moral justification for their profession this volume offers an alternative critique to challenge this perspective arguing that seeking to satisfy needs doesn t offer sufficient moral justification on its own it presents an extensive ethical analysis of the notion of need and develops a thought provoking case for a plural reconceptualisation of the notion of need as user based knowledge about product and service improvement opportunities it does this by drawing upon a range of ethical approaches including soran reader s needs ethics classical utilitarianism robert nozick s libertarian philosophy and john rawls theory of justice the book goes on to link these

approaches to concepts guiding design such as human centred design collaborative design and end user innovation written as a dialogue between a designer and his consciousness the book underlines the deliberative nature of applied design ethics and also highlights how consciousness challenges designers to solve their moral dilemmas this engaging format invites readers to become an intimate part of the discussion this book will be of interest to students and academics studying product design industrial design interaction design user experience design design ethics and sustainable development
