Spy Superb agent based computational economics using netlogo explores how researchers can create use and implement multi agent computational models in economics by using netlogo software platform problems of economic science can be solved using multi agent modelling mam this technique uses a computer model to simulate the actions and interactions of autonomous entities in a network in order to analyze the effects on the entire economic system mam combines elements of game theory complex systems emergence and evolutionary programming the monte carlo method is also used in this e book to introduce random elements the 11 models presented in this text simulate the simultaneous operations of

several agents in an attempt to recreate and predict complex economic phenomena this e book explains the topic in a systematic manner starting with an introduction for readers followed subsequently by methodology and implementation using netlogo the volume ends with conclusions based on the results of the experiments presented the e book is intended as a concise and vital resource for economists applied mathematicians social sciences scientists systems analysts operations researchers and numerical analysts

Mind MGMT: Bootleg solving complex problems in real world contexts such as financial investment planning or mining large data collections involves many different sub tasks each of which requires different techniques to deal with such problems a great diversity of intelligent techniques are available including traditional techniques like expert systems approaches and soft computing techniques like fuzzy logic neural networks or genetic algorithms these techniques are complementary approaches to intelligent information processing rather than

competing ones and thus better results in problem solving are achieved when these techniques are combined in hybrid intelligent systems multi agent systems are ideally suited to model the manifold interactions among the many different components of hybrid intelligent systems this book introduces agent based hybrid intelligent systems and presents a framework and methodology allowing for the development of such systems for real world applications the authors focus on applications in financial investment planning and data mining
