Distinguishing Errors of Memory from Errors of Understanding by Means of Self-instructional Tests 1964

this study compared two types of self instructional tests used as adjuncts to an expository text one type of test pure self test incorporated two types of items one assessing and remedying errors of memory and the other assessing and remedying errors of understanding the other type of self instructional test mixed self test was composed of a single type of complex question requiring answers involving memory plus understanding remedial feedback was likewise mixed forty eight high school sophomores were divided into three groups one group studied the expository text alone basic text group one studied the text plus the pure self test and one studied the text plus the mixed self test five days later each group was given a criterion test composed of the two self tests sans answers there were no significant differences among groups on total criterion test scores but the pure self test group did best on the pure items and the mixed self test group did best on the mixed items the basic text group did well on the pure recall items fair on the mixed recall and memory items but poorly on the pure understanding items the generality of these findings is limited by the fact that none of the three lesson formats were highly effective author

The Cambridge Handbook of Consciousness *2015-08-20*

the cambridge handbook of consciousness is the first of its kind in the field and its appearance marks a unique time in the history of intellectual inquiry on the topic after decades during which consciousness was considered beyond the scope of legitimate scientific investigation consciousness re emerged as a popular focus of research towards the end of the last century and it has remained so for nearly 20 years there are now so many different lines of investigation on consciousness that the time has come when the field may finally benefit from a book that pulls them together and by juxtaposing them provides a comprehensive survey of this exciting field an authoritative desk reference which will also be suitable as an advanced textbook

Human Memory 2017-07-04

provides students with a guide to human memory its properties theories about how it works and how studying it can help us understand who we are and why we do the things that we do for undergraduate and graduate courses in human memory this book provides a very broad range of topics covering more territory than most books in addition to some coverage of basic issues of human memory and cognition that are of interest to researchers in the field the chapters also cover issues that will be relevant to students with a range of interests including those students interested in clinical social and developmental psychology as well as those planning on going on to medical and law schools the writing is aimed at talking directly to students as opposed to talking down to them in a clear and effective manner not too dense but also not too conversational as well this 2nd edition includes a series of exercises that allow the student to try out the concepts and principles conveyed in the chapters or to use as the basis for exploring their own ideas

Laboratory Psychology 2009

experimental design is important enough to merit a book on its own without statistics that instead links methodology to a discussion of how psychologists can advance and reject theories about human behaviour the objective of this book is to fulfil this role the first four chapters lay the foundations of design in experimental psychology the first chapter justifies the prominent role given to methodology within the discipline whilst chapters two and three describe between subject and within subject designs chapter four compares and contrasts the traditional experimental approach with that of the quasi experimental or correlational approach concluding that the consequences of not recognizing the value of the latter approach can be far reaching the following three chapters discuss practical issues involved in running experiments the first of these offers a comprehensive guide to the student researcher who wants to construct a good questionnaire including a discussion of reliability and validity issues the next chapter considers the basic tools of psychological research whilst both discussing the theoretical problem of how a sample from a population is chosen and offering useful hints on the practical issue of finding adequate populations from which to select participants the next chapter considers ethical practice within psychological research written in large part so that psychology students will be better able to anticipate ethical problems in their studies before they occur the final two chapters consider reporting and reading psychological papers chapter eight details what should and should not be included in a laboratory report the contributors use their collective experience of marking numerous lab reports to highlight common errors and provide solutions finally chapter nine describes the various elements of a journal article including tips on how to get the best out of your journal reading

Developmental Psychology: From Infancy to Development 1973

developmental psychology from infancy to adulthood 3rd edition continues to bring together a balanced focus on australian and international research contributions in developmental psychology students and lecturers alike will find this text addresses the issues of lifespan development in a rigorous and challenging way using a thematic rather than chronological approach international and national research on graduate attributes consistently identifies critical thinking as one of the most important skills for psychology students the inclusion of critical thinking for group discussion at the end of each chapter is designed to encourage students in the development of this key skill these questions help students develop the ability to engage in discussions on truth and validity and evaluate the relative importance of ideas and data students learn by doing and this is encouraged through interactive features such as stop and review research focus boxes and practical exercises which engage them in group discussion and challenge them to delve into complex and cross domain analysis of lifespan development concept maps at the start of each chapter provide students with a visual snapshot of the chapter content
