it is highly probable that the ability to distinguish between living and nonliving objects was already well developed in early prehuman animals cognizance of the difference between these two classes of objects long a part of human knowledge led naturally to the division of science into two categories physics and chemistry on the one hand and biology on the other so deep was this belief in the separateness of physics and biology that as late as the early nineteenth century many biologists still believed in vitalism according to which living phenomena fall outside the confines of the laws of physics it was not until the middle of the nineteenth century that carl ludwig hermann von helmholz emil dubois reymond and ernst von bricke inaugurated a physicochem ical approach to physiology in which it was recognized clearly that one set of laws must govern the properties and behavior of all matter living and nonliving the task of a biologist is like trying to solve a gigantic multidimensional crossword fill in the right physical concepts at the right places the biologist depends on puzzle to the maturation of the science of physics much as the crossword solver depends on a large and correct vocabulary the solver of crossword puzzles needs not just a good vocabulary but a special vocabulary words like inee and oke are vitally useful to him but are not part of the vocabulary of an english professor

in our scientific age an understanding of physics is part of a liberal education lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually they need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas the non scientist needs a course of study that enables him to learn real science and make its own with delight for lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it he needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking he must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself he must think his own way through some scientific arguments he must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory he must see several varieties of scientific method at work and above all he must think about science for himself and enjoy that these are the things that this book encourages readers to gain by their own study and thinking physics for the inquiring mind is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom who want to know what physics really is
