**Forensic DNA Evidence Interpretation, Second Edition** 2016-04-21 there are two big problems that science still has not resolved they are what are we where do we come from these two questions have troubled people for centuries 150 years ago charles darwin wrote two books on the origin of species and the descent of man and selection in relation to sex in these two books the theory of species evolution was proposed all species are constantly evolving the present people and all species are formed through natural selection the basis of this theory is based on the comparison of biological forms now knowing that all the genetic information of living things is completely determined with dna is evolution still correct did humanity evolve from apes this book will answer these questions

**The Descent of Man: DNA coding gives the answer** 2020-07-04 there have been many books written about the theory of evolution probably your first thought here is that this is just one more book on the subject and you are right however this one has a different twist to it this one asks questions about the subject matter where answers have not been forthcoming taking a layman s approach to addressing the subject matter the author writes as though the reader is bringing nothing to this reading experience except a curiosity this book was not written for those of the scientific community per se there are quite a few questions that the author feels stand in the way of acceptance of the theory and remain unanswered these are brought to the forefront amid informative background knowledge of life and it s beginning and of necessity an opposing view that of course would be intelligent design intriguing topics addressed by others are presented such as the big bang beginning of the universe or the discovery of a particle found to exist that s smaller even than the parts of an atom i e smaller than the proton the neutron even the electron dark energy and it s possible catastrophic results on the universe are briefly discussed as well as the information stored in dna in all living cells which is the design criteria for life so you see the discussions are made purposely broad to offer the reader the necessary background for his better understanding of the subject matter
