the united states has jurisdiction over 3.4 million square miles of ocean in its exclusive economic zone a size exceeding the combined land area of the 50 states this expansive marine area represents a prime national domain for activities such as maritime transportation national security energy and mineral extraction fisheries and aquaculture and tourism and recreation however it also carries with it the threat of damaging and outbreaks of waterborne pathogens the 2010 gulf of mexico deepwater horizon oil spill and the 2011 japanese earthquake and tsunami are vivid reminders that ocean activities and processes have direct human implications both nationally and worldwide understanding of the ocean system is still incomplete and ocean research infrastructure is needed to support both fundamental research and societal priorities given current struggles to maintain operate and upgrade major infrastructure elements while maintaining a robust research portfolio a strategic plan is needed

this book reviews the corps of engineers experiences to date with the concept of adaptive management and provides advice on additional and more effective implementation of this planning approach the adaptive management concept itself is complex and evolving but might be summarized as learning while doing the book reviews literature on adaptive management and notes that a range of adaptive management practices present themselves for corps projects it is noted that there is no cookbook approach to adaptive management and the book encourages the corps of engineers to continue to work with and learn from its applications of the concept to facilitate institutional learning and to ensure that experiences are being employed across the agency the book recommends that a corps center for adaptive management be established the book also notes that greater involvement from the administration and congress will be essential to successful adaptive management applications as the corps efforts in this area will benefit from clarified water resources management objectives the authority to manage adaptively and from resources necessary for programs such as stakeholder collaboration and post construction evaluations

as a result of the 1989 Exxon Valdez oil spill in Prince William Sound Congress passed the Oil Pollution Act of 1990 (OPA 90) and within that legislation the Oil Spill Recovery Institute (OSRI) was born. This report assesses the strength and weaknesses of this research program with emphasis on whether the activities supported to date address the OSRI mission, whether the processes used are sound, and whether the research and technology development projects are of high quality.

Spills of emulsified fuels, risks, and response are part of an evolving body of work conducted by the National Research Council (NRC) to help inform debate and decision making regarding the ecological consequences of releases associated with the widespread use of fossil fuels. Like earlier NRC reports, it attempts to understand the chemical, physical, and biological behavior of a complex mix of compounds that make up various petroleum hydrocarbon-based fuels. The specific risk factors presented by emulsified fuels are difficult to characterize mainly because there have been no spills of emulsified

environmental problems in coastal ecosystems can sometimes be attributed to excess nutrients flowing from upstream watersheds into estuarine settings this nutrient over enrichment can result in toxic algal blooms shellfish poisoning coral reef destruction and other harmful outcomes all u s coasts show signs of nutrient over enrichment and scientists predict worsening problems in the years ahead clean coastal waters explains technical aspects of nutrient over enrichment and proposes both immediate local action by coastal managers and a longer term national strategy incorporating policy design classification of affected sites law and regulation coordination and communication highlighting the gulf of mexico s dead zone the pfiesteria outbreak in a tributary of chesapeake bay and other cases the book explains how nutrients work in the environment why nitrogen is important how enrichment turns into over enrichment and why some environments are especially susceptible economic as well as ecological impacts are examined in addressing abatement strategies the committee discusses the importance of monitoring sites developing useful models of over enrichment and setting water quality goals the book also reviews voluntary programs mandatory controls tax incentives and other policy options for reducing the flow of nutrients from agricultural operations and other sources
