the book is about the seed development in the model and crop plants seed development is a key step of the plant life cycle that determines the nutrient value of seeds the life for human civilization growth and development the nutrient value of seeds is mainly due to storage reserve products such as carbohydrates lipids triacylglycerols and proteins the book primarily focuses on application of the 21st century high throughput technologies transcriptomics proteomics metabolomics and systems biology in near complete understanding of the various processes involved in seed development in different crop plants the book reveals how such technologies have revolutionized our understanding of the multilayer processes and regulations involved therein by generating large scale datasets accumulated datasets provide basic knowledge to develop integrated strategies to eventually improve the nutritional value of plant seed and crop yield a critical goal in food security issues around the globe

this fourth edition of principles of seed science and technology like the first three editions is written for the

advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds the first nine chapters present the seed as a biological system and cover its origin development composition function and sometimes nonfunction performance and ultimate deterioration the last nine chapters present the fundamentals of how seeds are produced conditioned evaluated and distributed in our modern agricultural society two new chapters have been added in this fourth edition one on seed ecology and the second on seed drying finally revisions have been made throughout to reflect changes that have occurred in the seed industry since publication of the third edition because of the fundamental importance of seeds to both agriculture and to all of society we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves we hope that this feeling will be communicated to our readers furthermore we have attempted to present information in a straight forward easy to read manner that will be easily understood by students and lay persons alike special care has been taken to address both current state of the art as well as future trends in seed technology

the germination of seeds is a magical event in which a pinch of dust like material may give rise to all the power and the beauty of the growing plant the mechanisms of seed dormancy of the breaking of seed dormancy and of germination itself continue to remain shrouded in mystery despite the best efforts of plant scientists perhaps we are getting there but very slowly this book considers germination and dormancy from the point of view of plant physiology plant physiologists attempt to understand the relation ship between plant form and function and to explain in physical and chemical terms plant growth and development the place of germination and dormancy in plant ecophysiology is taken into account with attempts to understand the seed in its environment whether the environment be natural semi natural or wholly artificial in due course plant scientists hope to develop a precise understanding of germination and dormancy in cellular and molecular terms and therefore there is some biochemistry in this book biochemists who wish to learn something about seeds should find this book useful
