this white paper and draft legislation sets out the next stage in the coalition programme for government on improving the political system within the coalition programme was the ambition to reduce electoral fraud by speeding up implementation of individual electoral registration and this paper sets out detailed proposals to achieve that objective at present the electoral register is compiled by household and relies on trusting that those who register to vote are eligible individual electoral registration requires each elector to register to vote individually and for each elector to provide personal identifiers for verification the white paper sets out a plan to accelerate and implement individual electoral registration in line with the coalition agreement by 2014 and before the next uk parliamentary general election the government will also drop the previous government s plans for a voluntary phase but instead have a transition period which means electors who do not register by 2014 will not lose their entitlement to vote in the 2015 general election new electors postal and proxy voters will though need to register under the new system to be able to vote alongside this legislation a number of data pilot schemes will be launched that will compare the local electoral registers against those of public databases for accuracy and identify unregistered electors eligible to vote the legislation will also look at modernising the electoral registration in general including allowing electoral registration officers to offer more choice in registering including online giving people greater control over verification of their eligibility and once parliament is satisfied end the annual canvass of households as the primary means of maintaining the completeness and accuracy of the register

this book explores various approaches around the world regarding price term control and particularly discusses the effectiveness of two major paths ex ante regulatory and ex post judicial intervention price control and its limits are issues that affect all liberal market economies as well as more regulated markets for the past several years courts in many different countries have been confronted with the issue of whether and to what extent they should intervene regarding price related terms in standard form contracts especially in the area of consumer contracts open price clauses flat remunerations price adjustment clauses clauses giving the seller supplier the right to ask for additional payments bundling or partitioning practices etc a variety of price related terms are used to manipulate customers choices often also by exploiting their behavioral biases the result is an unfavorable contract that is later challenged in court however invalidating a given price term in standard forms e g of a banking or utilities contract only has an inter partes effect which means that in thousands if not millions of similar contracts the same clauses continue to be used effective procedural rules are often lacking therefore pricing patterns that serve to hide rather than to reveal the real cost of goods and services require special attention on the part of regulators the aim of this book is to determine the various approaches in the world regarding price term control and particularly to discuss the efficiency of both paths ex ante regulatory and ex post judicial intervention thanks to its broad comparative analysis this book offers a thorough overview of the methods employed in several countries it gathers twenty eight contributions from national

rapporteurs and one supra national rapporteur eu to the 2018 iacl congress held in fukuoka these are supplemented by a general report presented at the same iacl congress which includes a comparative analysis of the national and supranational reports the national contributors hail from around the globe including africa 1 asia 5 europe 17 the european union 1 and the americas 5
