there has been a flare up in interest in science policy and a key factor in this is the increased interest in analysing the role that research can play in informing policy making a pioneering venture in this field was government and research the rothschild experiment in a government department 1983 heinemann no other work had penetrated the deepest recesses of government to observe at first hand the attempts of a major department to determine its research agenda through collaboration with leading scientists in a wide range of fields to observe how research was commissioned and then evaluated by scientific teams and how it began to enter the policy blood streams of the departments this revised and augmented version updates the original text for current policy concerns and takes account of changes in science policy studies whilst preserving its essential themes it contains a succinct account of where matters now stand as well as an extended analysis of the themes that continue to dominate research and science policy finally the rest of the world has caught up with kogan and henkel twenty five years ago their ground breaking study of the uk s department of health led them to conclude that sustained interaction between scientists and bureaucrats was the key to unleashing the value of science for the policy process i found the first edition of this book the single most compelling and comprehensive treatment of this complex interaction they may have felt like voices in the wilderness then today however they can take their rightful place as pre cursors and leaders of what has become a mass movement for evidence based policy this re issued and significantly updated edition includes many recent initiatives that they and colleague steve hanney might rightfully claim as their offspring the timeliness of the current edition only serves to highlight just how far ahead of their time they really were dr jonathan lomas chief executive officer of the canadian health services research foundation

i was asked recently to prepare an independent background report on the subject of priority assessment in science and technology policy for the australian science and technology council the council while not necessarily endorsing this book suggested that a wider audience could be interested in the type of material contained in my report and kindly gave me permission to publish the material in my own right the present book contains this and other material some of which was presented at a seminar on national science policy implications for government departments arranged by the department of science and the environment additional ideas were developed in response to comments on the manuscript by referees as a result of discussions with professor john metcalfe and dr peter stubbs of manchester university a conversation with dr keith hartley of the university of york and in the wake of a communication from dr ken tucker assistant director bureau of industry economics australia science and technology policy affects and concerns everyone of us if for no other reason than we cannot escape in this interdependent world from the economic social and environmental overs pills generated by science and technology we

must face the problems and promises inherent in new and existing science and technology whether we like it or not not surprisingly this book finds that all industrialized countries seem to be facing similar economic and social problems

the scope and theory of american public administration have expanded outward over time through the process of interdisciplinary discourse interdisciplinary approaches are rooted in ancient times but it is in modern applications that the process has become most noticeable as a substantive influence in how academic disciplines and professional practices evolve the process of interdisciplinary discourse occurs first by decoding and interpreting basic language and concepts and then progresses to an operationalization of ideas consensus building synthesis and integration and eventually the systematization of knowledge it is from the systematization of knowledge that a discipline's foundations are forged and evolve government is as old as society but american public administration emerged as a structured field largely toward the late nineteenth century developing over the course of 125 years through the exchange of interdisciplinary ideas the current literature on interdisciplinary approaches focuses almost exclusively upon basic teaching and research applications this book extends the topic significantly by developing a formal process by which basic intermediate and advanced levels of communication are analyzed and understood the value of this approach rests in being able to explore public administration history and contemporary times through the assorted contexts and ideas which affected the lower order core constructs concepts values and principles and higher order associational constructs methodologies theories and foundations that have been forged as the field's scope and theory expanded over time through the exchange of interdisciplinary content lower levels of consensus from within caused segments of academicians to argue that an intellectual crisis had occurred reflecting the lack of a unifying theory or paradigm debate over what role traditional modes of inquiry and thought would have in a contemporary era of scientific techniques naturally propelled the field into a normative science debate this along with the rise of competing theories advancements in technology and an emphasis on establishing public administration as a relevant field with professional stature led to two subsequent recastings during which the field has modernized and updated itself gradually over the course of several years a third recasting may be on the horizon carrying forward the many shaping influences of interdisciplinary discourse
