unluckily in the recent literature the number of papers on the application of intelligent systems especially fuzzy sets have been decreasing considerably the potential for those applications however has not diminished at all on the contrary the more complex applications become and the more decision support systems rely on human knowledge and experience the more relevant and attractive become intelligent techniques for publications however very often the problem arises that those applications are not suited for publication because they are too complex for any one paper in this paper it will be attempted to describe important applications in traffic control in container terminal management and in ground control of airports and give further indications on other possible applications publisher's website
