this complete and coherent exposition complemented by numerous illustrative examples offers readers a text that can teach by itself fully rigorous in its treatment it offers a mathematically sound sequencing of topics the work starts with the most basic laws of matrix algebra and progresses to the sweep out process for obtaining the complete solution of any given system of linear equations homogeneous or nonhomogeneous and the role of matrix algebra in the presentation of useful geometric ideas techniques and terminology other subjects include the complete treatment of the structure of the solution space of a system of linear equations the most commonly used properties of determinants and linear operators and linear transformations of coordinates considerably more material than can be offered in a one semester course appears here this comprehensive volume by

human rights have a rich life in the world around us political rhetoric pays tribute to them or scorns them citizens and activists strive for them the law enshrines them and they live inside us too for many of us human rights form part of how we understand the world and what must or must not be done within it the ubiquity of human rights raises questions for the philosopher if we want to understand these rights where do we look as a set of moral norms it is tempting to think they can be grasped strictly from the armchair say by appeal to moral intuition but what if anything can that kind of inquiry tell us about the human rights of contemporary politics law and civil society that is human rights as we ordinarily know them this volume brings together a distinguished interdisciplinary group of scholars to address philosophical questions raised by the many facets of human rights moral legal political and historical its original chapters each accompanied by a critical commentary explore topics including the purpose and methods of a philosophical theory of human rights the orthodox political debate the relevance of history to philosophy the relationship between human rights morality and law and the value of political critiques of human rights
