The Industrial Revolution: A Translation into Modern English 2020-01-08 an easier to read current language version of the 1884 classic with a new extended editorial foreword arnold toynbee s 1884 book is the pioneering general study of the industrial revolution the author combines history and economics to examine its key features causes and effects toynbee rejects the notion that economic development is subject to any immutable iron laws for him there are no fixed limits to cultivatable land food supplies population increase or general economic growth and performance improvements in real wages rents profits and interest rates can continue indefinitely in addition no class has a predetermined place in the economy and society toynbee speculates about the future of the working classes and possibilities for improving their material conditions however he finds the marxist doctrine of state socialism inevitably replacing free market enterprise without basis in economic or historical fact this modernized version translates the book into current english to improve its readability and

understandability contents editorial foreword 1 introduction 2 england in 1760 population 3 england in 1760 agriculture 4 england in 1760 manufacturing and trade 5 england in 1760 the decline of the yeomanry 6 england in 1760 the condition of the wage earners 7 the mercantilist system and adam smith 8 the chief features of the revolution 9 the growth of pauperism 10 malthus and the law of population 11 the wage fund theory 12 ricardo and the growth of rent 13 two theories of economic progress 14 the future of the working classes

place and gives an account of the motivations and fortunes of patentees who obtained patents for a variety of purposes beyond the simple protection of an invention it includes the first in depth attempt to gauge the reliability of the patent statistics as a measure of inventive activity and technical change in the early part of the industrial revolution and suggests that the distribution of patents is a better guide to the advance of capitalism than to the centres of inventive activity it also queries the common assumption that the chief goal of inventors was to save labour and examines contemporary criticism of the patent system in the light of the changing conceptualisation of invention among natural scientists and political economists
