The Self and its Defenses 2016-12-08

this book presents a theory of the self whose core principle is that the consciousness of the self is a process of self representing that runs throughout our life this process aims primarily at defending the self conscious subject against the threat of its metaphysical inconsistency in other words the self is essentially a repertoire of psychological manoeuvres whose outcome is self representation aimed at coping with the fundamental fragility of the human subject this picture of the self differs from both the idealist and the eliminative approaches widely represented in contemporary discussion against the idealist approach this book contends that rather than the self being primitive and logically prior it is the result of a process of construction that originates in subpersonal unconscious processes on the other hand it also rejects the anti realistic eliminative argument that from the non primary derivative nature of the self infers its status as an illusory by product of real neurobiological events devoid of any explanatory role

this book proposes a novel method of combining the current approaches to counselling and psychotherapy into one coherent framework the authors argue that the cognitive behavioural tradition largely focused on thought patterns and the psychodynamic approach centred on the client s experience and relationships can be successfully integrated with insights from cognitive neuroscience to form a fruitful synthesis in doing so they provide a perspective that will enable practitioners to more fully appreciate each client s unique inner world based on their individual history and environment the authors point towards the brain s innate ability to understand and learn from experience so as to direct the growth of that inner world this book elaborates a method of tapping into this innate growth potential so as to help clients move forward when they have become trapped in non productive patterns or mental stalemates it will provide fresh insights and a valuable resource for counselling psychologists counsellors and psychotherapists as well as for academics and students in these fields
