From Evolution to Humanism in 19th and 20th Century America

2015-11-25

this book provides a background to the development of humanism it considers a range of important figures in the movement in the 19th century including r w emerson f e abbot william j potter robert ingsoll mark twain and g b foster

Tectonic Evolution, Collision, and Seismicity of Southwest Asia

2017-12-21

southwest asia is one of the most remarkable regions on earth in terms of active faulting and folding large magnitude earthquakes volcanic landscapes petroliferous foreland basins historical civilizations as well as geologic outcrops that display the protracted and complex 540 m y stratigraphic record of earth s phanerozoic era emerged from the birth and demise of the paleo tethys and neo tethys oceans southwest asia is currently the locus of ongoing tectonic collision between the eurasia arabia continental plates the region is characterized by the high plateaus of iran and anatolia fringed by the lofty ranges of zagros alborz caucasus taurus and pontic mountains the region also includes the strategic marine domains of the persian gulf gulf of oman caspian and mediterranean this 19 chapter volume published in honor of manuel berberian a preeminent geologist from the region brings together a wealth of new data analyses and frontier research on the geologic evolution collisional tectonics active deformation and historical and modern seismicity of key areas in southwest asia

Pathogenicity Islands and the Evolution of Pathogenic Microbes

2002-03-12

it has been known for a number of years that not only pathogenicity islands but also plasmids and bacteriophages are able to carry genes whose products are involved in pathogenic processes accordingly such elements and their products play an important role in pathogenesis due to the intestinal e coli as well to shigellae another interesting aspect which is reflected in different articles is that genomes evolve by acquisition of new pieces of dna following gene transfer but also by genome reduction different mechanisms include the deletion of sequences or the elimination of functions by the accumulation of point mutations or rearrangements

Biodiversity, Evolution and Biogeography of Plants

1999

list of figures list of tables list of symbols list of country acronyms foreword and acknowledgements i the transition economies ii saving by plan and in the market iii considering the competing explanations of transition in inflation and economic growth iv the inflationary explosion following price liberalization v the crisis years vi directed credits and financial repression in belarus vii stabilization in transition economies viii ukraine in the stabilization phase ix georgia from crisis to stabilization and then x the fallout of the russian financial c

Crisis, Stabilization and Growth

2012-12-06

this book introduces a number of recent advances regarding periodic feedback stabilization for linear and time periodic evolution equations first it presents selected connections between linear quadratic optimal control theory and feedback stabilization theory for linear periodic evolution equations secondly it identifies several criteria for the periodic feedback stabilization from the perspective of geometry algebra and analyses respectively next it

describes several ways to design periodic feedback laws lastly the book introduces readers to key methods for designing the control machines given its coverage and scope it offers a helpful guide for graduate students and researchers in the areas of control theory and applied mathematics

The Ethics of Aristotle

1885

th huxley 1825 1895 was not only an active protagonist in the religious and scientific upheaval that followed the publication of darwin s theory of evolution but also a harbinger of the sociobiological debates about the implications of evolution that are now going on his seminal lecture evolution and ethics reprinted here with its introductory prolegomena argues that the human psyche is at war with itself that humans are alienated in a cosmos that has no special reference to their needs and that moral societies are of necessity in conflict with the natural conditions of their existence seen in the light of current understanding of the mechanisms of evolution these claims remain as controversial today as they were when huxley proposed them in this volume george williams one of the best known evolutionary biologists of our time asserts that recent biological ideas and data justify a more extreme condemnation of the cosmic process than huxley advocated and more extreme denial that the forces that got us here are capable of maintaining a viable world james paradis an expert in victorian studies has written an introduction that sets the celebrated lecture in the context of cultural history revealing it to be an impressive synthesis of victorian thinking as well as a challenge to eighteenth century assumptions about the harmony of nature with huxley s lecture as a focal point the three parts of this book unite philosophy and science in a shared quest that recalls their common origins as systems of knowledge originally published in 1989 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905

Periodic Feedback Stabilization for Linear Periodic Evolution Equations

2017-02-08

an examination of why private farming in the transition economies of east central europe has not grown as quickly as expected

Evolution and Ethics

2014-07-14

this is the second of two volumes deriving from papers presented at the nineteenth annual uwm linguistics symposium held in milwaukee in 1990 it focuses on the evolution of grammatical form and meaning from lexical material which has reinvigorated historical analysis and theory and led to advances in the understanding of the relation between diachrony and universals the richness and potential of some of the leading approaches to grammaticalization are here illustrated in thirteen selected papers

The Evolution of the Messianic Idea

1908

viruses evolution and cancer basic considerations focuses on comparative biology and evolutionary aspects of dna and rna oncogenic viruses organized into seven parts this book begins with a discussion on the host cell virus

relationships some chapters follow that discuss the comparative aspects of dna and rna oncogenic viruses this work also elucidates the effects of oncogenic viruses on cell surface metabolism other chapters explore the comparative viral oncology comparative immunology of oncogenic viruses and evolution of viruses this book will be an invaluable material both to those concerned in the scientific and medical problems of cancer and will benefit all who are interested in virology and oncology

The Evolution of Agrarian Institutions

2001

this book based on lectures given at the accademia dei lincei is an accessible and leisurely account of systems that display a chaotic time evolution this behaviour though deterministic has features more characteristic of stochastic systems the analysis here is based on a statistical technique known as time series analysis and so avoids complex mathematics yet provides a good understanding of the fundamentals professor ruelle is one of the world s authorities on chaos and dynamical systems and his account here will be welcomed by scientists in physics engineering biology chemistry and economics who encounter nonlinear systems in their research

Nicomachean ethics books 3-10

1885

if ever a subject could benefit from a strong dose of perspective it s evolution this important new book supplies the necessary insights by bringing together the views of leading scientists professors and teachers working from the premise that only those students whose schools teach them about the nature of science will truly understand evolution the collection gathers 12 influential articles first published in the nsta journal the science teacher the articles fall into three categories the scientific perspective explores the evidence supporting evolution it looks at evolution s place in the national science education standards and at the thorny problem of calling evolution a theory the science teacher s perspective moves into the classroom discussing lesson plans that allow students to explore evolution and draw their own conclusions also included is the recently revised nsta position statement on evolution this collection comes from and is developed for the people on the front lines educators who deal with the controversy over evolution every day from a practical standpoint the book can help you address the subject in the classroom without being dragged into endless ultimately unproductive debate from a substantial standpoint it provides a remarkable overview of the state of teaching evolution in america

Plant Forms and Their Evolution in South Africa

1925

thorough highly informative and exhaustive study presents an exceptional collection of cases examining such topics as warfare as the business of one sex religion as a cause of war and war for the sake of glory cannibalism human sacrifice blood revenge and other factors in warfare among primitive peoples are also expertly examined

Evolution of the Ordinance of 1787

1891

the birth of bacterial genomics since the mid 1990s brought withit several conceptual modifications and wholly new controversies working beyond the scope of the neo darwinian evolutionary synthesis a group of leading microbial evolutionists addresses the following and related issues often with markedly varied viewpoints did the eukaryotic nucleus cytoskeleton and cilia also orginate from symbiosis do the current scenarios about he origin of mitochondria and plastids require revision what is the extent of lateral gene transfer between species among bacteria does the rdna phylogenetic tree still stand in the age of genomics is the course of the first 3 billion years of evolution even

knowable

Index Catalogue of the Library of the Surgeon-general's Office, United States Army (-United States Army, Army Medical Library; - National Library of Medicine).

1894

this book discusses the phenomenon of life including its origin and evolution and also human cultural evolution against the background of thermodynamics statistical mechanics and information theory among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems this paradox has its resolution in the information content of the gibbs free energy that enters the biosphere from outside sources as the author will show the role of information in human cultural evolution is another focus of the book this new edition discusses current research on the origin of life the distinction between thermodynamic information and cybernetic information new dna research and human prehistory developments in current information technology and the relationship between entropy and economics

Bibliography of the History of Medicine

1880

this monograph emphasizes the many facets of bacterial evolution as impacted by bacterial interactions with phages as well as to a lesser degree the evolutionary impact of phages on other organisms including other phages the book starts with a general overview of bacteriophages topics discussed in detail include but are not limited to mutagenesis migration natural selection and genetic drift as the drivers of evolution as well as an extensive discussion from the author's unique perspective on phage ecology

Authors and Subjects

1894

this very up to date and practical book written by engineers working closely in 3gpp gives insight into the newest technologies and standards adopted by 3gpp with detailed explanations of the specific solutions chosen and their implementation in hspa and lte the key technologies presented include multi carrier transmission advanced single carrier transmission advanced receivers ofdm mimo and adaptive antenna solutions advanced radio resource management and protocols and different radio network architectures their role and use in the context of mobile broadband access in general is explained both a high level overview and more detailed step by step explanations of hspa and lte implementation are given an overview of other related systems such as td scdma cdma2000 and wimax is also provided this is a must have resource for engineers and other professionals working with cellular or wireless broadband technologies who need to know how to utilize the new technology to stay ahead of the competition the authors of the book all work at ericsson research and are deeply involved in 3g development and standardisation since the early days of 3g research they are leading experts in the field and are today still actively contributing to the standardisation of both hspa and lte within 3gpp gives the first explanation of the radio access technologies and key international standards for moving to the next stage of 3g evolution fully operational mobile broadband describes the new technologies selected by the 3gpp to realise high speed packet access hspa and long term evolution lte for mobile broadband gives both higher level overviews and detailed explanations of hspa and lte as specified by 3gpp

Index-catalogue of the Library of the Surgeon General's Office,

United States

1894

evolution has provided a new understanding of reality with revolutionary consequences for christianity in an evolutionary perspective the incarnation involved god entering the evolving human species to help it imitate the trinitarian altruism in whose image it was created and counter its tendency to self absorption primarily however the evolutionary achievement of jesus was to confront and overcome death in an act of cosmic significance ushering humanity into the culminating stage of its evolutionary destiny the full sharing of god s inner life previously such doctrines as original sin the fall sacrifice and atonement stemmed from viewing death as the penalty for sin and are shown not only to have serious difficulties in themselves but also to emerge from a jewish culture preoccupied with sin and sacrifice that could not otherwise account for death the death of jesus on the cross is now seen as saving humanity not from sin but from individual extinction and meaninglessness death is now seen as a normal process that affect all living things and the religious doctrines connected with explaining it in humans are no longer required or justified similar evolutionary implications are explored affecting other subjects of christian belief including the church the eucharist priesthood and moral behavior

Index-catalogue of the Library of the Surgeon-general's Office, United States Army

1994-08-25

morphology and evolution of the insect abdomen with special reference to developmental patterns and their bearings upon systematics focuses on the morphology and evolution of the skeletal structures of the insect abdomen and the internal reproductive system emphasis is placed on patterns of development and their implications for systematics comprised of 44 chapters this book begins with an introduction to the principles of structural evolution paying particular attention to morphogenetical regularities and anagenesis heterochrony substitution and homology and analogy the next section is devoted to various aspects of the insect abdomen including abdominal segmentation appendages and ovipositor as well as the male external genitalia the male and female efferent duct and the abdominal ganglia the final section deals with the abdomen of a wide range of insect classes such as protura collembola orthoptera coleoptera homoptera mantodea and diptera this monograph will be of interest to entomologists physiologists and evolutionary biologists

Perspectives on Grammaticalization

2012-12-02

a new analysis of mind body unity based on the philosophy of spinoza

Viruses, Evolution and Cancer Basic Considerations

1989-09-07

the evolution of the eye spans 3 75 billion years from single cell organisms with eyespots to metazoa with superb camera style eyes at least ten different ocular models have evolved independently into myriad optical and physiological masterpieces the story of the eye reveals evolution s greatest triumph and sweetest gift this book describes its journey provided by publisher

Chaotic Evolution and Strange Attractors

1877

this book presents in a self contained form the typical basic properties of solutions to semilinear evolutionary partial differential equations with special emphasis on global properties it has a didactic ambition and will be useful for an applied readership as well as theoretical researchers

The Evolution

2004

this book introduces numerous algorithmic hybridizations between both worlds that show how machine learning can improve and support evolution strategies the set of methods comprises covariance matrix estimation meta modeling of fitness and constraint functions dimensionality reduction for search and visualization of high dimensional optimization processes and clustering based niching after giving an introduction to evolution strategies and machine learning the book builds the bridge between both worlds with an algorithmic and experimental perspective experiments mostly employ a 1 1 es and are implemented in python using the machine learning library scikit learn the examples are conducted on typical benchmark problems illustrating algorithmic concepts and their experimental behavior the book closes with a discussion of related lines of research

Evolution in Perspective

1963

provides a concise and engaging summary of modern evolutionary theory for students and general readers with little or no formal training in science explains variations within species heredity genetics and variation and mutation and discusses natural selection theory the origin of species and speciation in the galapagos islands examines the origin and early evolution of life and of humanity and discusses the intersection of science and politics includes a who s who of key figures with bandw photos and portraits plus a glossary the first edition was published in 1978 this second edition contains new chapters on neural and gene evolution and emphasis on molecular evolution the author was retired from the paleontology department of the natural history museum in london annotation copyrighted by book news inc portland or

The Evolution of Apollinaire's Poetics, 1901-1914

2003-12-29

mathematical analysis of evolution information and complexity deals with the analysis of evolution information and complexity the time evolution of systems or processes is a central question in science this text covers a broad range of problems including diffusion processes neuronal networks quantum theory and cosmology bringing together a wide collection of research in mathematics information theory physics and other scientific and technical areas this new title offers elementary and thus easily accessible introductions to the various fields of research addressed in the book
