this book introduces the technical foundations and tools for estimating the power consumption of
 internet networks and services including a detailed description of how these models are constructed
 and applied modeling the power consumption and energy efficiency of telecommunications networks
 can be used to gain insight into the construction of mathematical models that provide realistic
 estimates of the power consumption of internet networks and services this knowledge enables
 forecasting the energy footprint of future networks and services to integrate sustainability and
 environmental considerations into network planning and design features provides the motivation for
 developing mathematical models for telecommunications network and service power consumption and
 energy efficiency modeling presents factors impacting overall network and service power consumption
 discusses the types of network equipment and their power consumption profiles reviews the basics of
 power modeling including network segmentation traffic forecasting top down and bottom up models

wired and wireless networks data centers and servers explores the application of energy efficiency metrics for equipment networks and services this book is aimed at students and technologists as well as technology managers and policy makers this book will be of value to any organization that wishes to estimate the energy footprint of the use of information and communications technologies this book can also be integrated into a course on the sustainability of information and communications technologies
