this manual is for use by scientists and technicians who screen and evaluate varieties of sorghum and pearl millet for their grain quality it is based on experience in agronomy and food technology acquired over several years in sadc icrisat's sorghum and millet improvement program in zimbabwe where there is a focus on generalized screening methods for broad grain qualities rather than detailed component analysis of a molecular nature laboratory procedures including qualitative and quantitative methods were compiled from existing sources and modified in several ways for the program's use quality parameters were focused on grain on primary products such as flour meal and malt and on such secondary products as baked flour steamed flour and porridge the grain and these products were evaluated using physical and chemical methods and a database was created to serve as an empirical reference document derived from field and laboratory results the manual's first section on grain quality evaluation describes rapid techniques for routine screening the qualitative parameters used are color pericarp thickness testa endosperm texture and hardness quantitative parameters comprise 100 kernel weight agtron readings and moisture floaters dehulling loss milling yield size fractions and water absorption expressed as percentages eight chemical methods of evaluation are described in the second

section among which only rapid tannin analysis forms part of routine screening tests the last section

since 1950 the highway capacity manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the united states it has also been widely used abroad and has spurred the development of similar manuals in other countries the twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios the manual also addresses related pedestrian bicycle and transit issues this book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types the book is comprised of two volumes volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways weaving merging and diverging segments on freeways and multilane highways are also discussed in detail volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials it is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies it is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come

this encyclopaedic book proposes a sweeping reformulation of the basic concepts of western music

theory revealing simple structures underlying a wide range of practices from the renaissance to contemporary pop its core innovation is a collection of simple geometrical models describing the implicit knowledge governing a broad range of music making much as the theory of grammar describes principles that tacitly guide our speaking and writing each of its central chapters re examines a basic music theoretical concept such as voice leading repetition nonharmonic tones the origins of tonal harmony the grammar of tonal harmony modulation and melody these are flanked by two largely analytical chapters on rock harmony and beethoven wide ranging in scope and with almost 700 musical examples from the middle ages to the present day tonality an owner s manual weaves philosophy mathematics statistics and computational analysis into a new and truly twenty first century theory of music

this book describes the highway design and maintenance standards model hdm iii and its constituent components and provides a comprehensive discussion of the submodels their interaction and the operational parameters involved the hdm iii is designed to make comparative cost estimates and economic evaluations of different construction and maintenance options including different time staging strategies either for a given road project on a specific alignment or for groups of links on an entire network the user can search for the alternative with the lowest discounted total cost and can call for rates of return net present values or first year benefits if the hdm is used in conjunction with the expenditure budgeting model the set of design and maintenance options that would minimize total discounted transport costs or maximize net present value of an entire highway system under year to year budget constraints can be determined the hdm iii model is not only a readily usable program for handling voluminous computations automatically it is also a repository of the most extensive and consistent set of empirical data on the subject the information includes the qualitative structure and quantitative parameters of relationships among construction standards maintenance traffic characteristics road deterioration and vehicle operating costs
