the years around the turn of the century were a dynamic time in american art different and seemingly contradictory movements were evolving and the dominant style that emerged during this period was impressionism based in part on the broken brushwork and high keyed palette of claude monet it was a form especially suited to the dramatic landscape and shimmering light of california this book celebrates forty impressionist painters who worked in california from 1900 through the beginning of the great depression it includes widely recognized california artists such as maurice braun and guy rose less well known artists such as mary deneale morgan and donna schuster and eastern painters who worked briefly in the region such as childe hassam and william merritt chase the contributors essays examine the socioeconomic forces that shaped this art movement as well as the ways in which the art reflected california s self cultivated image as a healthful sun splashed arcadia

the doctoral thesis argues that the term subcreation with its revised and broadened definition in part differing from j r r tolkien s original term sub creation may be used for the discussion of the making of fictional worlds in literary discourse the successful conception of a fictional world depends on the reader s willing suspension of disbelief this depends both on the author and his skilled composition of

the world and all its aspects as well as on the reader's acceptance of this invented fictional world the author needs to create a narrative with an inner consistency which is crucial to achieving the effect of the reader's immersion in the fictional world the fundamental aspects that an author needs to realize to achieve successful subcreation have been structured into and analysed in four categories language and linguistic variation physiopoeia anthropoeia and mythopoeia furthermore this thesis shows that as contemporary examples of fantastic literature both tad williams's and terry pratchett's fictional worlds are successfully created through the realization of these aspects of subcreation apart from commenting on the success of the subcreative process this thesis also remarks upon the cultural influences both authors include in their writings while both may be considered anglophone in a general categorization pratchett's discworld retains a feeling of britishness that is not to be found in williams's otherland the thesis proposes several approaches to subcreation that may be studied subsequently so for example it may be possible to determine the success of an author's subcreation by collecting empirical data apart from literary works this field of studies may also include other media

what does it mean to be a young undocumented immigrant current public debate on undocumented immigration provokes discussion worldwide and it is estimated that there are more than 11 1 million undocumented immigrants in the us yet what it really means to be an undocumented immigrant appears less explicitly delineated in the debate this interdisciplinary volume applies theories from media cultural and literary studies to investigate how undocumented immigrant youth in the united states have claimed a public voice

by publishing their video narratives on youtube case studies show how political protest significantly shapes these videos as activists narrate and perform their dispossession redefining their understanding of the mechanisms of immigration in the americas and of home belonging and identity the impact of the videos is explored as the activists connect them to congressional bills and present their activities as a continuation of the legacy of the civil rights movements of the 1960s and 1970s this book will be of interest to a wide range of scholars and students involved in debates on migration communication new media culture protest movements and political lobbying

the business commercial and public sector world has changed dramatically since john oakland wrote the first edition of statistical process control a practical guide in the mid eighties then people were rediscovering statistical methods of quality control and the book responded to an often desperate need to find out about the techniques and use them on data pressure over time from organizations supplying directly to the consumer typically in the automotive and high technology sectors forced those in charge of the supplying production and service operations to think more about preventing problems than how to find and fix them subsequent editions retained the tool kit approach of the first but included some of the philosophy behind the techniques and their use the theme which runs throughout the 7th edition is still processes that require understanding have variation must be properly controlled have a capability and need improvement the five sections of this new edition spc never has been and never will be simply a tool kit and in this book the authors provide not only the instructional guide for the tools but communicate the management practices which have become so vital to success in organizations throughout the world the book is supported by the authors extensive and latest consulting work within thousands of organisations worldwide fully updated to include real life case studies new research based on client work from an array of industries and integration with the latest computer methods and minitab software the book also retains its valued textbook quality through clear learning objectives and end of chapter discussion questions it can still serve as a textbook for both student and practicing engineers scientists technologists managers and for anyone wishing to understand or implement modern statistical process control techniques
