Pounder's Marine Diesel Engines and Gas Turbines 2009-08-18

since its first appearance in 1950 pounder's marine diesel engines has served seagoing engineers students of the certificates of competency examinations and the marine engineering industry throughout the world each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine now in its ninth edition pounder's retains the directness of approach and attention to essential detail that characterized its predecessors there are new chapters on monitoring control and himsen engines as well as information on developments in electronic controlled fuel injection it is fully updated to cover new legislation including that on emissions and provides details on enhancing overall efficiency and cutting co2 emissions after experience as a seagoing engineer with the british india steam navigation company doug woodyard held editorial positions with the institution of mechanical engineers and the institute of marine engineers he subsequently edited the motor ship journal for eight years before becoming a freelance editor specializing in shipping shipbuilding and marine engineering he is currently technical editor of marine propulsion and auxiliary machinery a contributing editor to speed at sea shipping world and shipbuilder and a technical press consultant to rolls royce commercial marine helps engineers to understand the latest changes to marine diesel engines careful organisation of the new edition enables readers to access the information they require brand new chapters focus on monitoring control systems and himsen engines over 270 high quality clearly labelled illustrations and figures to aid understanding and help engineers quickly identify what they need to know

Pounder's Marine Diesel Engines 2016-02-25

pounder's marine diesel engines sixth edition focuses on developments in diesel engines the book first discusses theory and general principles theoretical heat cycle practical cycles thermal and mechanical efficiency working cycles fuel consumption vibration and horsepower are considered the text takes a look at engine selection and performance including direct and indirect drive maximum rating exhaust temperatures derating mean effective pressures fuel coefficient propeller performance and power build up the book also examines pressure charging matching of turboblowers blower surge turbocharger types constant pressure method impulse turbocharging method and scavenging are discussed the text describes fuel injection sulzer man and burmeister and wain engines the selection also considers mitsubishi gmt and doxford engines the text then focuses on fuels and fuel chemistry operation monitoring and maintenance significant operating problems and engine installation engine seatings and alignment reaction measurements crankcase explosions main engine crankshaft defects bearings fatigue and overhauling and maintenance are discussed the book is a good source of information for readers wanting to study diesel engines

Modern Marine Internal Combustion Engines 2020-06-30

this book offers a comprehensive and timely overview of internal combustion engines for use in marine environments it reviews the development of modern four stroke marine engines gas and gas diesel engines and low speed two stroke crosshead engines describing their application areas and providing readers with a useful snapshot of their technical features e.g. their dimensions weights cylinder arrangements cylinder capabilities rotation speeds and exhaust gas temperatures for each marine engine information is provided on the manufacturer historical background development and technical characteristics of the manufacturer's most popular models and detailed drawings of the engine depicting its main design features this book offers a unique self contained reference guide for engineers and professionals involved in shipbuilding at the same time it is intended to support students at maritime academies and university students in naval architecture marine engineering with their design projects at both master and graduate levels thus filling an important gap in the literature

Shipping World & Shipbuilder 1992

pounder's marine diesel engines and gas turbines tenth edition gives engineering cadets marine engineers ship operators and managers insights into currently available engines and auxiliary equipment and trends for the future this new edition introduces new engine models that will be most commonly installed in ships over the next decade as well as the latest legislation and pollutant emissions procedures since publication of the last edition in 2009 a number of emission control areas ecas have been established by the international maritime organization imo in which exhaust emissions are subject to even more stringent controls

in addition there are now rules that affect new ships and their emission of co2 measured as a product of cargo carried provides the latest emission control technologies such as scr and water scrubbers contains complete updates of legislation and pollutant emission procedures includes the latest emission control technologies and expands upon remote monitoring and control of engines

Shipping World and Shipbuilding and Marine Engineering News 1982

since its first appearance in 1950 pounder s marine diesel engines has served seagoing engineers students of the certificates of competency examinations and the marine engineering industry throughout the world each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine this eighth edition retains the directness of approach and attention to essential detail that characterized its predecessors there are new chapters on monitoring control systems and governor systems gas turbines and safety aspects of engine operation important developments such as the latest diesel electric lng carriers that will soon be in operation after experience as a seagoing engineer with the british india steam navigation company doug woodyard held editorial positions with the institution of mechanical engineers and the institute of marine engineers he subsequently edited the motor ship journal for eight years before becoming a freelance editor specializing in shipping shipbuilding and marine engineering he is currently technical editor of seatrade a contributing editor to speed at sea shipping world and shipbuilder and a technical press consultant to rolls royce commercial marine designed to reflect the recent changes to sqa marine and coastguard agency certificate of competency exams careful organisation of the new edition enables readers to access the information they require brand new chapters focus on monitoring control systems and governor systems gas turbines and safety aspects of engine operation high quality clearly labelled illustrations and figures

Pounder's Marine Diesel Engines and Gas Turbines 2020-12-01

interest in the fascinating field of multicriteria optimization and its application to design processes has grown very quickly in recent years researchers and practising engineers will find this book an comprehensive presentation of this subject after an introduction to multicriteria optimization and the advantages of using multicriteria techniques the first part of the book presents methods and computer procedures for solving multicriteria optimum design problems including interactive methods and knowledge based systems the second part presents an extensive range of applications of these methods to design processes in the following fields mechanisms and dynamic systems aircraft and space technology machine tool design metal forming and cast metal technology civil and architectural engineering and structures made of advanced materials

Pounder's Marine Diesel Engines 2003-12-09

list of members in each volume

Fairplay International Shipping Weekly 1981

this book summarizes advances in a number of fundamental areas of optimization with application in engineering design the selection of the best or optimum design has long been a major concern of designers and in recent years interest has grown in applying mathematical optimization techniques to design of large engineering and industrial systems and in using the computer aided design packages with optimization capabilities which are now available

Shipbuilding & Marine Engineering International 1983

consists largely of abstracts of articles and papers of interest to shipbuilders ship owners and marine engineers

Ship & Boat International 1992

Diesel & Gas Turbine Worldwide Catalog 1983

Multicriteria Design Optimization 2012-12-06

Transactions - North East Coast Institution of Engineers and Shipbuilders 1991
