thanks to remarkable advances in modern health care attributable to science engineering and medicine it is now possible to cure or manage illnesses that were long deemed untreatable at the same time however the united states is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance the use of increasingly expensive prescription drugs is a significant part of this problem making the cost of biopharmaceuticals a serious national concern with broad political implications especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years finding a way to make prescription medicines and health care at large more affordable for everyone has become a socioeconomic imperative affordability is a complex function of factors including not just the prices of the drugs themselves but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts therefore any solution to the affordability issue will require considering all of these factors together the current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole making medicines affordable examines patient access to affordable and effective therapies with emphasis on drug pricing inflation in the cost of drugs and insurance design this report explores structural and policy factors influencing drug pricing drug access programs the emerging role of comparative effectiveness assessments in payment policies changing finances of medical practice with regard to drug costs and reimbursement and measures to prevent drug shortages and foster continued innovation in drug development it makes recommendations for policy actions that could address drug price trends improve patient access to affordable and effective treatments and encourage innovations that address significant needs in health care

THE NEW HANDBOOK OF PRESCRIPTION DRUGS

1970

this book presents an extensive study on the effectiveness of recent regulations on pharmaceutical prices in india exploring the weaknesses in the design and implementation of pharmaceutical price controls and investigating what can be done to fix the broken system in addition it examines the extent to which essential medicines are actually made affordable by price controls the book argues that companies make the pharmaceutical price control regime largely ineffective by coordinating to increase pre regulation prices by diversifying horizontally away from the regulated markets and increasing prices in the unregulated markets by manipulating trade margins and by refusing to comply with the regulation because the penalties remains negligible the book draws on extensive empirical research involving india s 2013 drug price control order and widely used medicines such as paracetamol and metformin to illustrate how firms have weakened regulation it argues that the regulatory regime can be strengthened by using systematic analysis of product and region level data in the indian pharmaceutical industry and by screening for the strategies that firms currently employ to circumvent regulation in closing it discusses recent efforts to strengthen the implementation of price controls in india and expanding the scope of price controls to medical devices

why does us health care have such high costs and poor outcomes dr david s guzick offers this critique of the american health care industry and argues that it could work more effectively by rebalancing care cost and access for decades the united states has been faced with a puzzling problem despite spending much more money per capita on health care than any other developed nation its population suffers from notoriously poorer health in comparison with 10 other high income nations in fact the us has the lowest life expectancy at birth the highest rates of infant and neonatal mortality and the most inequitable access to physicians when adjusted for need in an introduction to the us health care industry dr david s guzick takes an in depth look at this troubling issue bringing to bear his unique background as a physician economist former university of rochester medical school dean and former president of the university of florida health system dr guzick shows that what we commonly refer to as the us health care system is actually an industry forged by a unique collection of self interested and disjointed stakeholders he argues that the assumptions underlying well functioning markets do not align with health care the resulting market imperfections combined with entrenched industry stakeholders have led to

a significant imbalance of care cost and access using a nontechnical framework dr guzick introduces readers to the economic principles behind the function and dysfunction of our health care industry he shows how the market based approach could be expected to remedy these problems while detailing the realities of imperfections regulations and wealth inequality on those functions he also analyzes how this industry developed presenting the conceptual underpinnings of the health care industry while detailing its history and tracing the creation and entrenchment of the current federation of key stakeholders government insurance companies hospitals doctors employers and drug and device manufacturers in the final section of the book dr guzick looks to the future describing the prevention innovation and alternative financing models that could help to rebalance the priorities of care cost and access that americans need an online supplement on covid 19 is available as is a discussion guide for instructors to access this supplemental material please visit jhupbooks.press.jhu.edu
