Cyberspace Law 2013-08-21 some have argued that life began in the chemical rich seas of the early earth the famous primordial soup while others are convinced that life began in strange vents pumping hot water out of the sea floor where the chemical reactions that sustain living cells could get started or perhaps life began in volcanic ponds on land or in meteorite impact zones or even in beds of clay each idea has attracted staunch believers who promote it with an almost religious fervor but the story of life s origins is more than this it is a story that takes in some of the greatest discoveries in modern biology from cells to dna and evolution to life s family tree this book is the first full history of the scientists who struggled to explain one of the greatest mysteries of all how and why life began

Hinckley Triumph Triples & Fours 750, 900 2010-05-15 the existence of soft excess emission originating from clusters of galaxies de ned as em sion detected below 1 kev in excess over the usual thermal emission from hot intracluster gas hereafter the icm has been claimed since 1996 soft excesses are particularly portant to detect because they may at least partly be due to thermal emission from the warm hot intergalactic medium where as much as half of the baryons of the universe could be they are therefore of fundamental cosmological importance soft excess emission has been observed and has also given rise to controversy in a number of clusters mainly raising the following questions 1 do clusters really show a soft excess 2 if so from what spatial region s of the cluster does the soft excess or inate 3 is this excess emission thermal originating from warm hot intergalactic gas at 6 temperatures of 10 k or non thermal in which case several emission mechanisms have been proposed interestingly some of the non thermal mechanisms suggested to account for soft excess emission can also explain the hard x ray emission detected in some clusters for example by rxte and bepposax also see petrosian et al 2008 chap 10 this issue rephaeli et al 2008 chap 5 this issue
