enable regulatory agencies to control the disturbance and degradation of the
environment caused by man s activities created by governments through
legislation the permit processes are administered by elected officials
environmental legislation is relatively new as an independent field of the
law the laws themselves are primarily a conglomeration of older legal
doctrines from other fields of law modified and adapted for particular
situations landau and rheingold 1971 like other laws environmental laws are
meant to serve and protect the rights and well being of the public however
like other laws they have created confusion a proliferation of costly
paperwork and some inequities numerous statutes dealing with most aspects of
pollution exist at every level of government so many in fact that they
frequently conflict and overlap these statutes establish a public policy
toward polluters they also empower the regulatory bodies that issue permits
it would be impossible to compile a list of requirements for each type of
permit therefore this book will acquaint the reader with the common aspects
of environmental permits their terminology components and application
processes this book covers the permit process from initial agencies applicant
contacts through application parts and procedures to application approval
special emphasis has been placed on bringing together copies of laws and
