breakthroughs in science pm is the ultimate guide to our high tech lifestyle this book constitutes the refereed proceedings of the 19th international conference on computer aided verification thirty three state of the technology papers are presented together with fourteen tool papers three invited papers and four invited tutorials all the current issues in computer aided verification and model checking from foundational and methodological issues to the evaluation of major tools and systems are addressed although the question posed by the title of this book has generated considerable debate the essential issue remains open and largely blurred while some believe that there is no so called small market problem others discern discrimination against small market companies i e companies with a strong position in their home markets but a modest position in the european and global markets and a consequent need for changes in competition law the author of this enormously helpful work here sets the stage for meaningful discussion by analysing the ec merger regulation s objectives economic foundations and application practice to present a reasoned view of the issues that can be considered relevant for such a discussion considering their effect on the small market problem the author scrutinizes such factors as the following the commission s methodology for delineating relevant markets in merger assessments unnecessary prohibition caused by overestimation of the market power of small market mergers erroneous approval of cases that should actually be prohibited impact of the so called harvard and chicago schools of competition theory and their key policy implications process related alternative views of competition and new synthesizing approaches relevant criteria for a proper analysis of market power concentration measures and

market shares barriers to entry price and profitability analyses and product definition v geographic definition of markets in a final chapter the author presents some tentative conclusions normative in nature concerning the problem and the relevant issues relating to it as the first in depth analysis of the issues that are actually involved with its particular diagnosis of the assessment of market power in considering the relevant issues for the problem this study brings into salience the terms of the debate on the problem and thus takes a giant step forward towards defining what needs to be done competition lawyers policymakers and academics in europe and elsewhere will find the discussion of great value in real world problems related to finance business and management mathematicians and economists frequently encounter optimization problems in this classic book george dantzig looks at a wealth of examples and develops linear programming methods for their solutions he begins by introducing the basic theory of linear inequalities and describes the powerful simplex method used to solve them treatments of the price concept the transportation problem and matrix methods are also given and key mathematical concepts such as the properties of convex sets and linear vector spaces are covered george dantzig is properly acclaimed as the father of linear programming linear programming is a mathematical technique used to optimize a situation it can be used to minimize traffic congestion or to maximize the scheduling of airline flights he formulated its basic theoretical model and discovered its underlying computational algorithm the simplex method in a pathbreaking memorandum published by the united states air force in early 1948 linear programming and extensions provides an extraordinary account of the subsequent development of his subject including research in mathematical theory computation economic analysis and applications to industrial problems dantzig first achieved success as a statistics graduate student at the university of california berkeley one day he arrived for a class after it had begun and assumed the two problems on the board were assigned for homework when he handed in the solutions he apologized to his professor jerzy neyman for their being late but explained that he had found the problems harder than usual about six weeks later neyman excitedly told dantzig i ve just written an introduction to one of your papers read it so i can send it out right away for publication dantzig had no idea what he was talking about he later learned that the homework problems had in fact been two famous unsolved problems in statistics what is the link between information communication technology and women s empowerment in today s development context how can ict facilitate the pursuit of a better world exploring the rich complexity of the contexts in which they live and work the authors of women and ict in africa and
